# The Council — AI Source Assurance and Traceability Register

*AIG-AIMS-13 · v1.5 draft · Draft for Council review · OFFICIAL · ISO/IEC 42001:2023*

Purpose: hold the standing traceability from each priority authoritative source (law, regulation, standard, policy, principle) through to the requirement it creates, the playbook chapter and the artefact or control that satisfies it, the applicability trigger, the responsible specialist, and the verification dates. This is the single source-of-truth ledger for the priority source set behind the framework.

Legal status: a structured traceability and assurance record, not legal advice. Applicability and interpretation of each source remain with the named specialist function (AIG-AIMS-04). It complements AIG-AIMS-05 (which logs change events). Any automated horizon-scanning tool is an optional input, not a controlled source.

| Document control | Controlled value |
|---|---|
| **Document ID** | AIG-AIMS-13 |
| **Version** | 1.5 draft |
| **Status** | Draft for Council review |
| **Document owner** | AI Governance Lead |
| **Primary specialist owners** | Legal Services / Monitoring Officer, DPO and named control functions (AIG-AIMS-04) |
| **Approving authority** | Competent Council authority under Constitution and Scheme of Delegation; |
| **Source register control status** | Twenty-one source records are held in |
| **Review frequency** | Quarterly source verification; annual full review; event-driven on regulatory change |
| **Source position** | Playbook §2.5 regulatory landscape and §6.6.5 horizon scanning; complements AIG-AIMS-05 (applicable requirements, change register and horizon scanning) |

| 1.5 draft | 12 October 2026 | v3.9.10: source records SRC-STD-D/ | AI Governance I |

# The Council — Source Assurance and Traceability Register

*AIG-AIMS-13 · v1.5 draft · Draft for Council review · OFFICIAL · ISO/IEC 42001:2023*

Purpose: one row per authoritative source, traced through to the requirement, the playbook chapter and the artefact or control that satisfies it, with the responsible specialist and verification dates.

Current position: the six existing source records are retained. Proposed versioned entries in rows 13–24 cover legal and framework sources named in AIG-AIMS-05 that were not separately traceable here. New entries are not verified (Last verified is blank and highlighted): owners must validate authoritative text/version, currency, applicability, and verification date before reliance. Licensed standards are identified by edition only; no clause text is reproduced.

# AIG-AIMS-13 — Definitions, Controlled Vocabulary and Use Rules

| Status | Meaning |
|---|---|
| **Current** | Source is in force and verified as the latest authoritative version at the last-verified date. |
| **Under review** | A change is known or expected; the entry is being reassessed and may change. |
| **Superseded** | Replaced by a newer instrument or version; retained for audit until the successor is verified and mapped. |
| **Horizon-watch** | Not yet in force or not yet applicable; monitored so it enters control on commencement. |
| **Gap – no source** | A requirement or principle the framework relies on for which no authoritative monitored source yet exists; a deliberate finding for action. |

### Use rules

Verify each source against its authoritative URL at every review; record the URL and the version or date see

A status of Current requires a last-verified date; Next review is calculated quarterly from the last-verified date cycle); record event triggers in the Review trigger column. Rows with no last-verified date are highlighted an

Name the accountable specialist from the controlled role list (AIG-AIMS-04); do not free-type roles.

This register complements AIG-AIMS-05, which logs change events and horizon scanning; any automated h input only.

It is a traceability and assurance record, not legal advice; applicability decisions rest with the named speciali

Record a Gap – no source line where the framework relies on something with no monitored authoritative sou

## PROPOSED INTEGRATION

*NOT APPROVED — additive integration annex only; existing workbook content and Native evidence index: AIG-INV-04 — Evidence index. Evidence IDs locate native Provenance rule: every reused fact/result must carry its source record/sheet and row*

| Integration relationship | Native source / artefact | Native record locator | Join key(s) | Proposed integration rule / use | Required provenance: row, version, as-of | Blank / zero handling | Reporting / audit reconciliation |
|---|---|---|---|---|---|---|---|
| Key/evidence joins | AIG-INV-04 (AI Register; Evidence index) | AI Register: AIR-ID; Evidence index: Evidence ID + AIR-ID | AIR-ID | Use AIR-ID for all system-level joins; use Evidence ID to point to an indexed evidence record. Do not join on system name. | Native source row (sheet + row), artefact/record ID, source version, evidence date and source as-of/snapshot date; location/link where permitted. | Blank means unknown/not supplied/not applicable only when explicitly marked; never coerce blank to 0 or infer an evidence record. | Reconcile unique AIR-ID and the evidence index reference against the native AIG-INV-04 workbook before relying on it. |
| Risk assessment | AIG-ASS-02 Risk Assessment Worksheet | Risk Assessment + Document Control | AIR-ID | Link the current assessment to the system record; retain assessment details and scoring rationale in AIG-ASS-02, not duplicated here. | AIG-ASS-02 version; worksheet row/section or assessment record identifier; assessment date; source evidence IDs; as-of date for inputs. | Unanswered risk or score is not zero and must not be treated as a completed assessment. | Confirm risk inputs and calculated result against the native AIG-ASS-02 record and indexed evidence. |
| Decision / minutes | AIG-DEC-03 Governance Decision Record and the native forum minutes | Decision record ID; meeting/minute reference | AIR-ID + Decision Record ID; relate to AIG-DEC-04 Event ID where present | AIG-DEC-03 owns the reasoned decision; minutes remain native records; cross-reference, do not reproduce the decision narrative. | Decision-record version/ID, meeting/minute reference, record row/section, decision date and as-of date. | No decision, approver or date is inferred from a paper, plan or empty field. | Reconcile the decision record and minute reference with delegated authority and corresponding AIG-DEC-04 event. |
| Gate plan / event / condition | AIG-DEC-04 AI Governance Gate Log | Gate Log record; native Event ID, AIR-ID, conditions and due/status fields | AIR-ID + Event ID; Condition ID if assigned by the Council | Distinguish proposed/planned gate from dated event; conditions are attached to an event. Do not treat a plan as an approval. | Native sheet + row, Event ID, Condition reference, AIG-DEC-04 version and as-of/snapshot date. | Missing date/status remains missing; open, overdue, waived and not applicable are distinct states, not numeric zero. | Match event, condition, evidence reference and latest recorded decision; investigate inconsistencies. |
| Live monitoring / review | AIG-OPS-02 AI Post-Deployment Monitoring and Review Log | Monitoring Log; Sampling Method; record row | AIR-ID + monitoring period + metric/review record; Event ID/Condition ref when relevant | Link observed result and reproducible sample to AIG-OPS-02; threshold breaches trigger documented consideration and, where applicable, AIG-DEC-04 escalation. | AIG-OPS-02 version, Monitoring Log row, monitoring period, review date, sample source/population and as-of date. | Blank result/sample/threshold is not zero, compliance or no breach. | Reproduce sample and compare actual result with the approved threshold; trace breach response to AIG-DEC-03/AIG-DEC-04/AIG-OPS-03/AIG-AIMS-08 as appropriate. |
| Reporting population | AIG-INV-04 AI Register and Assessment summary; AIG-DEC-03 and native minutes; AIG-DEC-04 plan/event/condition; AIG-OPS-02 | Source records for each reporting period; native evidence index for evidence pointers | AIR-ID, Evidence ID, Decision Record ID, Event ID, Condition ref, monitoring period | Report at the declared snapshot date; show numerator, denominator, exclusions, missing/unknown and not-applicable separately. Report plans versus completed events separately. | Freeze reporting as-of date; retain the source workbook/document version and source row identifiers for each sampled/aggregated record. | Do not count blanks as zero or complete; distinguish zero observed from no data and from not applicable. | Reconcile totals to source populations and document filters, period, exclusions and unresolved links. |
| Audit sampling | AIG-AIMS-07 Internal Audit Programme and Procedure; sample sources AIG-INV-04 AI Register/Assessment summary, AIG-DEC-03/minutes, AIG-DEC-04 plan/event/condition, AIG-OPS-02 log | Auditor-selected native records; evidence index is a locator, not a substitute for evidence | AIR-ID + each native record key above | Record sampling frame, population size, inclusion/exclusion criteria, selection method and seed/date where random; inspect source records rather than only summary views. | Record each sampled native sheet/document and row/record ID, version, source as-of date, retrieval date, criterion tested, and evidence index reference. | An absent record is a sample finding/gap, not a zero; unknown is not pass. | Auditor records independent selection, trace-back and reproducibility in the AIG-AIMS-07 audit working papers/findings. |
| Native evidence index | AIG-INV-04 Evidence index (native evidence index) | Evidence ID, AIR-ID, artefact/record ID, version, evidence/decision date, status, location/link, gate/condition reference as present | Evidence ID + AIR-ID; optionally Event ID / Condition ref | Use as a pointer to the authoritative artefact, not as the decision itself or a copied evidence store. Preserve its native metadata. | Capture source row, source workbook version and as-of date alongside index metadata when reporting/auditing. | Empty index fields signal missing provenance; do not supply invented versions, dates, links or approval. | Check that linked artefact exists, version matches, is appropriate to the question and has not been superseded. |

PROPOSED QA INDEX — NOT APPROVED. A source reference does not establish applicability or compliance. See AIG-AIMS-05 and AIG-AIMS-13; owners must validate the current source, case-specific scope, control evidence and adopted status.

| Requirement ID | Instrument / edition | Conditional scope / relevance | Source URL | Owner validation status |
|---|---|---|---|---|
| REQ-011 | Section 46 Code of Practice on records management under FOIA | Screen the statutory code requirement against this artefact's actual use and record evidence/version; see the AIG-AIMS-05 Applicable Requirements entry (REQ-011) for the controlled position. | https://ico.org.uk/for-organisations/foi/freedom-of-information-and-environmental-information-regulations/section-46-code-of-practice-records-management/ | Specialist validation required |
| REQ-040 | ISO/IEC 42001:2023 Artificial intelligence management system | Proposed management-system design mapping; licensed clause review and adoption needed. | https://www.iso.org/standard/42001 | Specialist validation required |
| REQ-044 | Council AI Governance Playbook — proposed edition/version and currency to be owner-validated | Proposed Council suite edition and controlled adoption remain unconfirmed. | Internal controlled suite — 52 purpose-grouped artefacts (see AIG-GOV-03) | Specialist validation required |

## AIG-AIMS-13 / PROPOSED THREE-ARTEFACT SOURCE CONTRACT

| | |
|---|---|
| **Status** | PROPOSED INTEGRATION DESIGN ONLY. This sheet does not amend the artefact's native assessment, decision authority, data or formulas. |
| **Role of this file** | Source assurance: Record source citations and applicability separately. AIG-INV-04 Evidence index holds case pointers; map source refs are relationship evidence, not legal conclusions or gate approvals. |
| **AIG-INV-04 source** | Separate AIG-INV-04 AI Register: official AIR-ID, current position, in-file Assessment summary/Evidence index. Reconcile against authoritative AIG-INV-04 before using a copied value. |
| **AIG-DEC-04 source** | Separate AIG-DEC-04 Gate Log: prospective Gate plan, dated Gate events, event-linked Conditions. A planned gate is not a decision. A decision requires AIG-DEC-03 or approved minutes and proper delegation. |
| **Map source** | Proposed standalone Capabilities and System Map (candidate catalogue ID AIG-INV-05): UC/CAP and component relationship pointers. Edge ID is not an approval or permission; AIG-AGT-04/AIG-AGT-05 remain sources of agent scope/authority. |
| **Data exchange** | Use controlled AIR-ID across files. Where applicable reference exact Event ID, Condition ID, Evidence ID, AG-ID and Edge ID. Record source file/version/as-at with imported or quoted evidence; no live cross-workbook formula is assumed. |
| **Change trigger** | New or expanded system/tool access, or a material model, data, interface, purpose or agent change: log the map change, obtain owner reassessment and escalate to the proper AIG-DEC-04 gate/AIG-DEC-03 decision when required. |
| **Validation before use** | The INTEGRATION INV-04 DEC-04 tab in this workbook is current supporting design guidance (not historical) and holds the detailed join notes. Controlled owners must reconcile real records, validate values and formulas in Excel, and approve migration/cutover; existing Council records remain unchanged until then. |
