AIG-DEC-04 | Using the separate Gate Log

Status	Draft for Council review — unpopulated design draft; not adopted policy or an operational replacement.
Plan ≠ event	Gate plan is prospective. Only a dated Gate events row says a gate occurred. A plan cannot grant approval.
Event ≠ authority	An assurance opinion or review may be logged without being an approval. Record the delegated decision-maker and authoritative AIG-DEC-03 decision or approved-minutes reference for a decision event.
Conditions	Keep each condition as its own row linked to a dated Decision event (Outcome 'Progress with condition', 'Re-authorise' or 'Resume'); record the action, owner, due date, state, verifier/date and closure evidence or waiver authority. Overdue is derived from the due date, never typed.
Join to AIG-INV-04	Use the same controlled AIR-ID as the AIG-INV-04 Register. There are no fragile external-workbook formulas; reconcile AIG-INV-04 current status and latest Event ID to the actual AIG-DEC-04 event and decision record.
Separate system map	The proposed standalone Capabilities and System Map links use cases, capabilities and components to controlled AIR-IDs. It is not this Gate Log, the AIG-DEC-01 governance Gate Map or an approval source. No gate is proved by a map link.
Before migration	Agree field dispositions with the owners of the Council's existing (pre-suite) gate and decision logs, split legacy multi-condition cells without losing meaning, reconcile event IDs and actual delegations, test with controlled records in Excel, approve cutover and archive sources. None were migrated here.
Priority override	A priority override is its own Event type. Record the delegated decision-maker and the AIG-DEC-03 or approved-minutes reference; the priority before and after, reason and Assurance update reference live in that record. Leave Outcome blank or No decision: an override changes governance attention, not progress through a gate.
Change 29 Sep 2026	Added Event type "Priority override" and its row check, so the override route in AIG-ASS-01 and Playbook Annex G.4 has a controlled home.
One outcome per UC-ID	AIG-DEC-03 (or approved minutes) is the authoritative decision record, one outcome per UC-ID. Log one Gate events row per UC-ID: where one meeting decides several uses, enter a row for each (Event ID with a suffix, e.g. EVT-0012-a, EVT-0012-b) with that use's own outcome. A row listing several UC-IDs is flagged by the Row check.
Controlled lists	Gate / forum uses the AIG-DEC-01 gates on the Lists sheet (configure forum names locally). Event types include Intake / registration; outcomes include Suspend, Decommission, Re-authorise and Resume (lifts a precautionary pause; allowed only in the event straight after the pause for the same use). The Lists sheet maps each outcome to the AIG-DEC-03 outcome vocabulary and each condition state to AIG-DEC-03 and the UC-ID current view.
Evidence, source and time	Gate events carry Time, Source and Evidence ID(s) (AIG-INV-04 Evidence index) and the event-time lifecycle stage (columns R–U). Conditions carry Verified by / date and, for monitoring conditions, the AIG-OPS-02 evidence ref needed before closure.
QA change 29 Sep 2026	Row checks added to Gate plan and strengthened on Gate events and Conditions; see Document Control.
Precautionary pause	An immediate precautionary pause (Playbook §4.7.17) does not wait for a governance decision, so it is not logged as a Decision. Use Event type "Precautionary pause (containment)" with Outcome "Paused — pending decision", the person who applied it in Decision-maker / role, the AIG-OPS-03 incident ref (column V) and the date by which the delegated authority will decide on continued suspension, resumption or withdrawal (column W). That later decision is its own Decision event with its AIG-DEC-03 ref: Resume where the approval is unchanged, otherwise the outcome decided (see Resume after a pause). Proposed — for Council confirmation.
Change 30 Sep 2026	v3.9.2: Gate plan duplicate check keys on AIR-ID + UC-ID scope + gate; precautionary pause event type added (Gate events columns V–W, Lists row 15, row check). See Document Control.
Screening considered (column X)	Gate events column X records whether the decision-maker saw and considered the equality, human rights and data protection screening (including any done by reference, Playbook §4.6). It must be Yes for a Decision with Outcome Progress, Progress with condition, Re-authorise or Resume; it matches the tick line in AIG-DEC-03. Proposed — for Council confirmation.
Resume after a pause	Outcome "Resume" is a Decision that lifts a precautionary pause with the use's approval unchanged (AIG-DEC-03: Approved, or Approved with conditions where new conditions are set). Enter it as the next Gate events row for the same AIR-ID and UC-ID after the pause row; the row check flags it otherwise. Log a pause one row per affected UC-ID, so each use can be resumed separately. Where the use needs reassessment first, use Re-authorise. Proposed — for Council confirmation.
Locked row checks	The row-check columns (Gate plan M; Gate events N and Q; Conditions J) are locked with sheet protection and no password, so they cannot be typed or pasted over. Every input column stays editable, and any filter buttons still work. To sort, or to change a formula, unprotect the sheet (no password) and protect it again afterwards.

Change 3 Oct 2026	v3.9.8: column X (screening considered), Outcome Resume (Lists row 16) and locked row-check columns. See Document Control.

AIG-DEC-04 / GATE PLAN — WHAT IS EXPECTED

Prospective requirements only. A plan is not evidence that a gate happened or that a use was approved.

planned gate concerns named UC-ID(s) or a shared system baseline. The duplicate check keys on AIR-ID + UC-ID scope + gate; each use of a system has

Plan ID	AIR-ID	Gate / forum	Trigger / stage	Requirement	Basis / triage ref	Target date	Responsible role	Plan state	N-A / waiver rationale and authority ref	UC-ID scope(s) (blank only for explicit system baseline)	Decision scope (UC-ID specific / Shared system baseline)	Row check

AIG-DEC-04 / GATE EVENTS — WHAT ACTUALLY HAPPENED

One dated occurrence per row. An assurance opinion is not a delegated approval. Decision events need the authoritative AIG-DEC-03 decision or approved-minutes reference.

pause (containment)", Outcome "Paused — pending decision", no AIG-DEC-03 ref needed; record the AIG-OPS-03 incident

Event ID	AIR-ID	Plan ID (if any)	Gate / forum	Event type	Date	Outcome	Decision-maker / role	AIG-DEC-03 / minutes ref	Assurance opinion ref	Technical snapshot / as-at ref	Next gate / action	Recorded by	Row check	UC-ID(s) covered by this dated event	Decision scope (UC-ID specific / Shared system baseline)	Decision-scope completeness prompt	Time (hh:mm)	Source (minutes / decision record / system)	Evidence ID(s) (AIG-INV-04 Evidence Index)	Event-time lifecycle stage	Incident ref (AIG-OPS-03), precautionary pause	Follow-up decision due date (precautionary pause)	Screening considered by the decision-maker (Yes / No)

AIG-DEC-04 / CONDITIONS — WHAT REMAINS OPEN

One condition per row. Parent Event ID must exist in Gate events. Evidence of closure or a properly authorised waiver is required.

UC-ID per row; the parent Gate events row carries one UC-ID. Shared baseline conditions have a blank UC-ID. Overdue is derived by the Row check (Open and

Condition ID	Event ID	AIR-ID	Required action / condition	Action owner	Due date	State	Closed / waived on	Evidence / waiver authority ref	Row check	UC-ID scope (blank only if shared system condition)	Condition scope (UC-ID specific / shared system baseline)	Verified by / date	Monitoring condition? (Yes / No)	AIG-OPS-02 evidence ref (monitoring conditions)

AIG-DEC-04 / CONTROLLED LISTS AND OUTCOME MAPPING

Controlled values used by the validations. Gate names follow the AIG-DEC-01 Gate Map (forum names configurable locally). The mapping shows how each gate outcome corresponds to the AIG-DEC-03 decision outcome used in AIG-INV-04 and the UC-ID current view.

Gate (AIG-DEC-01)	Lifecycle stage (Playbook §3.6)
Gate 0 Intake / opportunity	Idea and Innovation
Gate 1 Strategic prioritisation	Registration and Intake
Gate 2 Technical design review	Risk Assessment and Review
Gate 3 Case for change / strategic alignment	Approval and Assurance
Gate 4 Procurement	Deployment and Operation
Gate 5 Ethics assessment	Monitoring and Review
Gate 6 Deployment / go-live	Retirement and Decommissioning
Gate 7 Operate, monitor, review & change	
Gate 8 Retirement / closure	
Other forum (name it in Decision-maker / role)	

Gate event Outcome (AIG-DEC-04)	AIG-DEC-03 outcome for the UC-ID	Allowed Event type
Progress	Approved	Decision
Progress with condition	Approved with conditions (≥1 Conditions row)	Decision
Return for evidence	Deferred	Decision
Pause	Deferred (before go-live) / Suspended (in operation)	Decision
Stop	Rejected	Decision
Suspend	Suspended	Decision
Decommission	Retired	Decision
Re-authorise	Approved or Approved with conditions (after reassessment)	Decision
Opinion only	None — assurance input, not a decision (Pending)	Assurance opinion / Review only
No decision (or blank)	None (Pending)	Review only / Priority override / Intake / registration
Paused — pending decision	None: containment, not a decision (the UC-ID keeps its recorded AIG-DEC-03 outcome until the follow-up decision; Playbook §4.7.17)	Precautionary pause (containment)
Resume	Approved or Approved with conditions: the approval in force before the precautionary pause carries over (new conditions go on Conditions rows); only in the event straight after the pause for the same AIR-ID and UC-ID	Decision

Condition state (AIG-DEC-04)	AIG-DEC-03 condition state (shared list)	UC-ID current view condition state
Open	Open	Open
Closed-verified	Closed-verified	Closed-verified
Accepted-open	Accepted-open	Accepted-open
Waived	Waived	Waived
Unknown	Unknown	Unknown
Superseded (not a state)	Not a state: close the old condition as Waived, citing the replacing Condition ID and the authority in the evidence / waiver ref	Waived
Overdue (not a state)	Derived from Open + due date before today; never typed	Open (overdue shown by the check)

AIG-DEC-04 — Document Control

Controlled working template. Draft for Council review; not Council-adopted and not effective until formally approved.

Field	Controlled value
Document ID	AIG-DEC-04
Artefact	AI Governance Gate Log (proposed separate design)
Version	1.3 draft
Status	Draft for Council review
Document owner	AI Governance Lead
Approving body	Competent Council authority under Constitution and Scheme of Delegation; AI Assurance Board provides assurance where applica
Approval date	Not yet approved
Effective date	Not yet effective
Next review date	To be set on approval: 12 months after effective date or sooner following material change
Classification	OFFICIAL

Change history

Version	Date	Change	Author / owner
1.0 draft	29 September 2026	First controlled version with document control. QA remediation — applied findings QA-095, QA-155, QA-189, QA-216, QA-224, QA-231, QA-232, QA-233, QA-234, QA-238, QA-251, QA-265, QA-266, QA-272, QA-291 (see QA change log).	AI Governance Lead
1.1 draft	30 September 2026	v3.9.2: Gate plan duplicate check now keys on AIR-ID + UC-ID scope + gate, so several uses of one system no longer raise false duplicates; a system-level row with a blank UC-ID counts separately (scenario finding W-02). Gate events: new Event type “Precautionary pause (containment)” with Outcome “Paused — pending decision”, no AIG-DEC-03 ref required, and new columns V (AIG-OPS-03 incident ref)	AI Governance Lead
1.2 draft	3 October 2026	v3.9.7: Row checks tightened so incomplete rows no longer show “Check against source”. Gate plan: Requirement and Plan state must be filled. Gate events: a linked Plan ID must match the event’s gate and (where the plan names one) its UC-ID; an Assurance opinion event needs its assurance ref; Opinion only and No decision are accepted only on the event types the Lists mapping allows; one UC-ID per row is	AI Governance Lead
1.3 draft	3 October 2026	v3.9.8: Gate events gains column X “Screening considered by the decision-maker (Yes / No)”. The row check flags a Decision with outcome Progress, Progress with condition or Re-authorise unless X is Yes, matching the AIG-DEC-03 screening line. New Outcome “Resume” (Lists row 16): a Decision that lifts a precautionary pause with the approval unchanged; the row check accepts it only when	AI Governance Lead
