AI Intake Form

The Council · AI Governance Playbook (Level 5 document, §3.8)

Complete this form before any procurement, development, commissioning or deployment of an AI system — or on discovery of an AI system already in use, which must be submitted for retrospective intake without delay. No AI system may proceed, or continue in operational use, without completed intake. Every use enters through this form; for a possibly low-impact use, AI Fast-Track Screening (AIG-INV-02) is completed as a step within this intake and does not replace the facts below. Sections 1–7 are completed by the Service Owner and submitted to the AI Governance Lead, who completes Sections 8–11. This is the single information submission expected from the Service Owner at intake; later governance records carry the same AIR-ID forward rather than asking you to re-enter the same information.

1. Submission Details

Submitted by	Name of person completing this form
Role / job title	
Service area / directorate	
Service Owner (if different)	Accountable owner for the proposed system
Contact email	
Date of submission	DD / MM / YYYY

2. Proposed AI System

Use-case schedule — keep one system/AIR-ID and list each materially distinct purpose, workflow or outcome on a separate UC-ID row: UC-ID; purpose/outcome; affected people; data/context; decision or action; Service Owner; source intake. For every UC-ID, record the specific priority/risk assessment, required route and delegated decision/conditions by reference. Shared platform evidence may be cross-referenced. Do not treat system registration, ordinary tool use, or a descriptive map as use approval.

Proposed system / tool name	
System status	Proposed / In pilot / Already in operational use / Identified via Shadow AI or embedded-AI discovery
Date first used (if already in use)	DD / MM / YYYY — including any pilot or informal use
Aggregated disclosure?	Yes / No — same public tool disclosed by multiple staff. One tool-level intake is submitted; the AI Governance Lead holds the register entry at tool level and individual disclosures are attached as supporting evidence (Playbook §3.8)

Description of the system and what it does

Business purpose and intended outcomes

Operational context (where and how it will be used; who relies on the output)

3. Supplier and Product

Supplier / developer	Where known
Product / model name & version	

Source

☐ Procured ☐ Internally developed ☐ Free / public tool ☐ Embedded in existing product ☐ Not yet decided

Deployment model

☐ Cloud / SaaS ☐ On-premise ☐ Hybrid ☐ Unknown

New investment needed for this use? (new funding, extra licences or usage charges, procurement, contract or licence change, or a business case; sets whether Gates 1 and 3 apply, AIG-DEC-01 Gate 1 and 3 rule. If answers conflict, for example No here but the Source or procurement route needs a new contract, the stricter answer applies and the governance steward flags it)

☐ Yes ☐ No — no new funding, licences, charges, procurement, contract or licence change ☐ Unsure (counts as Yes)

Is the system’s approval current? (only for a system already on the AI Register: Approved or Approved with conditions, Active, review date not passed; if not, Gates 1 and 3 apply; the governance steward checks the answer against the Register)

☐ Yes — Approved (or Approved with conditions) and Active, review not overdue ☐ No — suspended, lapsed or review overdue ☐ Unsure (counts as No) ☐ Not applicable (new system)

Relationship to systems already in governance (sets the UC-ID: another team's use takes its own UC-ID; a change re-enters on the same AIR-ID and UC-ID; Playbook §3.10)

☐ New system ☐ New use of a system on the AI Register (AIR-ID _____) ☐ Another team's use of something already approved for a different team (own new UC-ID under AIR-ID _____) ☐ Change to a use already in governance (UC-ID _____; re-entry)

4. AI Capability

Type of AI (select all that apply)

☐ Generative AI ☐ Predictive / ML ☐ Computer vision ☐ Natural language processing ☐ Robotic process automation ☐ Optimisation / decision support ☐ Agentic AI (takes actions autonomously) ☐ Other (specify below)

If other, specify	
Does it make or support decisions about individuals?	Yes / No — describe
Is any significant decision about a person taken without meaningful human involvement (UK GDPR Art 22A)?	Yes / No / Unsure — describe who reviews the decision, their authority and information to change it; informs the contestability tier in AIG-OPS-04
Does the system take actions itself, rather than only producing outputs for a person to act on?	Yes / No — describe the actions it can take, e.g. updating records, sending communications, invoking other systems
Systems, tools and data sources it can access or act upon	List all — this defines the action scope assessed at governance review
Human control over actions	Human executes all actions / Human approves each action before execution / System acts within defined bounds with human monitoring / System acts fully autonomously

5. Data

Categories of data the system will process

Personal data involved?	Yes / No / Unsure — governance/privacy will determine whether additional privacy assessment is required
Special category data involved?	Yes / No / Unsure — e.g. health, ethnicity, biometrics
Estimated number of individuals affected	
Main data sources	Where the data comes from

Personal data involved?	Yes / No / Unsure — governance/privacy will determine whether additional privacy assessment is required
Record of processing (ROPA) reference, if known	The entry in the Council's record of processing activities that covers this use. Leave blank if unsure; the DPO will confirm.

6. Initial Risk Self-Assessment

Tick any risk areas you think may apply, then describe the main concerns below. This is an initial view only — the AI Governance Lead will confirm the formal classification.

☐ Bias / fairness ☐ Privacy / data protection ☐ Transparency / explainability ☐ Safety
☐ Accuracy / hallucination ☐ Security ☐ Supplier / third-party ☐ Over-reliance / automation bias
☐ Equality impact on protected groups ☐ Reputational / public trust ☐ Legal / regulatory ☐ None identified

Describe the main risks and any groups who could be affected

Human oversight in place?	Yes / No — describe how outputs are checked
Could the system materially affect a resident's access to a service or benefit?	Yes / No

7. Service Owner Declaration

I confirm the information above is accurate to the best of my knowledge. For a proposed system: I will not proceed to procurement or deployment until formal governance approval has been issued (Playbook §3.10). For a system already in use: I will cooperate fully with the governance assessment and will comply with any direction to modify, suspend or withdraw the system pending approval (Playbook §3.9.5, §4.7.17).

Service Owner name	
Signature	
Date	DD / MM / YYYY

FOR AI GOVERNANCE USE ONLY

Sections 8–11 are completed by the AI Governance Lead in line with the intake process. The Service Owner should not complete the AGPI, Risk Worksheet, AI Register, Gate Log or Governance Decision Record unless specifically asked to supply evidence or a formal decision input.

Light-touch eligibility (record the AIG-INV-02 result before Step 2; AI Governance Lead validation required)

Fast-Track Screening result (AIG-INV-02)	**Record**
AIG-INV-02 reference for each UC-ID screened	____
Result for each UC-ID	**All No / Any Yes or Unsure / Not screened**
Validated by (AI Governance Lead) and date	____ · **DD / MM / YYYY**

Ten No answers in AIG-INV-02 make that use provisionally eligible for the light-touch route only. The AI Governance Lead must validate that the submission is complete, that no material uncertainty has been understated and that no mandatory trigger is present. Any Yes or Unsure continues to Step 2 and full triage. After Governance Lead validation, record the system as Light-touch / Low / Priority 4 or 5 in the AI Register (AIG-INV-04), then record the proportionate delegated decision for the UC-ID (AIG-DEC-03 or approved minutes) and a Gate Event (AIG-DEC-04) before operation. The screen is a routing decision, not a use or deployment approval or independent risk acceptance, and it never creates an AIR-ID by itself. Re-run AIG-INV-02 on material change or if any answer becomes Yes or Unsure.
The ten screening questions are held only in AI Fast-Track Screening (AIG-INV-02). Where Light-touch is sought, complete it for each materially distinct UC-ID as part of this intake and record its reference and result above; a materially changed use returns to full intake.

8. Initial Screening (Step 2)

Date form received	
Submission complete & sufficient?	Yes / No — if no or materially uncertain, return for clarification and do not confirm light-touch eligibility
In scope of AI Governance Framework?	Yes / No
Mandatory escalation triggers apply?	Yes / No (see §4.4.6) — if yes, notify AI Assurance Board
Can it take actions (is it an agent)?	Yes / No — if Yes, run the Agentic Triage and open an Agent Record (ASBOM): at least the core record, more where its tier and features require (Playbook F.3)
Initial risk classification	Tier 1 Low / Tier 2 Medium / Tier 3 High / Tier 4 Critical
Indicative AGPI / triage notes	For aggregated disclosures, assess by use-case cluster — clusters may receive different classifications (Playbook §3.8)

9. AI Register Entry (Step 3)

AIR-ID assigned	AIR-XXXX
UC-ID(s) / use-case schedule	Record one row per materially distinct purpose/workflow/outcome; repeatable schedule.
Agentic? (can it act)	Yes / No
Agent Record (ASBOM) reference	AG-ID(s) + ASBOM version (AIG-AGT-04) (open where agentic)
Date of intake	
Governance status	e.g. Intake received — assessment pending

10. Governance Pathway Assignment (Step 4)

Assigned governance pathway / tier	

Required assessments and approvals (tick all required)

☐ DPIA ☐ Equality Impact Assessment (EIA) ☐ ATRS record ☐ Model Card
☐ Human Rights Assessment ☐ Responsible AI Assessment ☐ Ethics review ☐ Security review

Indicative timeline	
Governance checklist issued to Service Owner?	Yes / No

11. Intake Confirmation (Step 5)

Confirmed risk classification	
Required governance pathway	
AI Governance Working Group contact	
Intake acknowledgement issued (date)	
AI Governance Lead name	
Signature	
Date	DD / MM / YYYY

Document control

Administrative control record. This artefact remains a working draft until formally approved.

Field	Controlled value
Document ID	AIG-INV-03
Version	1.11 draft
Status	Draft for Council review
Document owner	AI Governance Lead
Approving body	Pending confirmation — Competent Council authority under Constitution and Scheme of Delegation; AI Assurance Board provides assurance where applicable; exact delegation and publication authority to be verified by Monitoring Officer.
Approval date	Not yet approved
Effective date	Not yet effective
Next review date	To be set on approval: 12 months after the effective date, or sooner following material change
Classification	OFFICIAL
Change (1.3 draft, 29 September 2026)	The light-touch eligibility screen now records the AIG-INV-02 Fast-Track Screening reference, result and validation instead of repeating the ten questions, so the questions are held in one place only.
Change (1.4 draft, 29 September 2026)	QA remediation — applied findings QA-013, QA-063, QA-172, QA-173, QA-185, QA-200, QA-221 (see QA change log). Fast Track stated as a step within this intake; Art 22A meaningful-human-involvement question added to Section 4; ASBOM reference placeholder corrected; delegated decision and Gate Event step added after light-touch validation.
Change (1.5 draft, 30 September 2026)	v3.9.1: standards cross-reference note updated to the 54-entry requirement inventory (AIG-AIMS-05 REQ-054, Civil Contingencies Act 2004, added).
Change (1.6 draft, 1 October 2026)	v3.9.3: standards cross-reference note cites the 55-entry requirement inventory (AIG-AIMS-05 REQ-055, NIST AI 600-1 Generative AI Profile, added).
Change (1.7 draft, 2 October 2026)	v3.9.5: standards cross-reference note cites the 56-entry requirement inventory (AIG-AIMS-05 REQ-056, SI 2026/425 ICO statutory code of practice on AI and automated decision-making, added). Proposed — for Council confirmation.
Change (1.8 draft, 3 October 2026)	v3.9.7: after Governance Lead validation the Register records “Light-touch / Low / Priority 4 or 5”, matching the Playbook rule that Light-touch is open to Priority 4 and 5 uses (Priority 5 – Observe was previously left out of the wording). New question “New investment needed for this use?” (Yes / No / Unsure, Unsure counts as Yes) sets whether Gates 1 and 3 apply (AIG-DEC-01 v1.11). Proposed for Council confirmation.
Change (1.9 draft, 3 October 2026)	v3.9.8: new question “Is the system’s approval current?” for a system already on the AI Register (Unsure counts as No). If the approval is not current, Gates 1 and 3 apply (AIG-DEC-01 v1.12). The new-investment “No” option is worded for new and existing systems alike, with a note that conflicting answers take the stricter one; “approval current” includes Approved with conditions; new question on the relationship to systems already in governance (new system, new use, another team’s use, or a change). Proposed for Council confirmation.

Field	Controlled value
Change (1.10 draft, 4 October 2026)	v3.9.9: the “takes actions” answer opens at least the core Agent Record, more where tier and features require (Playbook F.3). Proposed for Council confirmation.
Change (1.11 draft, 12 October 2026)	v3.9.10: standards cross-reference note cites the 58-entry requirement inventory (AIG-AIMS-05 REQ-057 DAMA-DMBOK and REQ-058 ISO/IEC 5259, added as voluntary data governance references). Data section adds an optional Record of processing (ROPA) reference, confirmed by the DPO. Proposed — for Council confirmation.

PROPOSED INTEGRATION ADDITIONS — REVIEW REQUIRED

Proposed AIG-INV-05 handoff — source remains Intake (AIG-INV-03)

Map handoff after intake: preserve the submitted use case, owner, service/workflow and this intake's controlled source reference as the source record. If AIG-INV-05 is approved for use, governance may assign a UC-ID and CAP-ID references; do not retype the intake or issue an AIR-ID from the map. The authorised Register steward alone reconciles an official AIR-ID in AIG-INV-04. Unconfirmed UC/CAP/system relationships remain Proposed/Unknown, and map completion is not permission to procure, deploy or continue operation.

This integrated draft includes revisions to body content above; the annex below is supplementary proposed content for Council review. This draft and annex do not record live facts, completed actions, delegated authority, Council adoption or approval.

PROPOSED identity and registration hand-off

At submission, record a provisional intake reference only, assigned under the approved intake process. It is not an AIR-ID, does not establish Register status and must not be represented as Council registration or approval.

The AI Governance Lead should route validated intake to the authorised Register steward. That steward issues/records the permanent Council AIR-ID in the AI Register (AIG-INV-04) under the controlled numbering rule and records the provisional-reference-to-AIR-ID crosswalk. Until issued, leave AIR-ID blank and state pending; do not fabricate or pre-allocate a permanent identifier.

After issuance, use AIR-ID across AIG-INV-04, Gate Log (AIG-DEC-04), checklist (AIG-ASS-03), decision record (AIG-DEC-03), incident (AIG-OPS-03), deployment plan (AIG-OPS-01) and reports (AIG-OPS-05). System identity and current governance/operational state are read from AIG-INV-04, not maintained as a competing status in this intake. Intake completion is not permission to procure, deploy or continue use.

Review points — not yet decided

Confirm which role assigns provisional references and which authorised role issues AIR-IDs in AIG-INV-04; confirm handling of duplicate submissions, multi-component systems and the crosswalk retention location. This draft asserts no allocation or approval.

Standards and legal applicability — proposed QA cross-reference

PROPOSED QA INDEX — NOT APPROVED LEGAL ADVICE OR EVIDENCE OF COMPLIANCE. The listed instruments may be relevant to this artefact, but applicability depends on the case, service and Council delegation. Legislation, official guidance, Council policy and voluntary standards are different authority classes. The full 58-entry requirement inventory, authoritative URLs, validation owners and current versions are in AIG-AIMS-05; source checks are in AIG-AIMS-13. Do not treat a template, plan or cross-reference as completed assessment, adopted policy, ISO conformity or legal sign-off.

Requirement / instrument	Why check it here	Source
