The Council — AIMS Statement of Applicability

Controlled design position for ISO/IEC 42001:2023 Annex A · AIG-AIMS-02 · v1.2 draft

Status statement: the 38 controls are mapped to the current suite, but no control is represented as approved, implemented, evidenced or effective until the Council has operated and verified it.

Document control	Controlled value
Document ID	AIG-AIMS-02
Version	1.2 draft
Status	Draft for Council review
Document owner	AI Governance Lead
Approving authority	To be confirmed under Council delegations
Effective date	Pending formal approval
Review frequency	At least annually and on material change
Classification	OFFICIAL

Current readiness summary	
Measure	Result
Total Annex A controls	38
Applicable	38
To be determined	0
Design mapped (applicable)	38
Implemented or beyond (applicable)	0
Evidence-ready (applicable)	0
Decision QA complete	38
Operational implementation	0%

A.10 Third-party and customer relationships	3	3	3	0	0

Adoption actions

1. Validate every control decision and working title against the Council's licensed copy of ISO/IEC 42001:2023.
2. Confirm owners, approving authority and any justified exclusions.
3. Approve the SoA together with the AIMS scope, policy, risk treatment and objectives.

4. Populate evidence locations as controls are operated; do not advance a status without evidence.
5. Review the SoA after risk assessment, material change, internal audit and management review.

Version	Date	Change	Author / owner
1.0 draft	06/08/2026	Initial ISO/IEC 42001 Annex A Statement of Applicability mapped to the AI Governance Playbook (AIG-GOV-02) and AIG-AIMS-01.	AI Governance Lead
1.1 draft	28 September 2026	Make effectiveness colours match exact controlled statuses.	
1.2 draft	29 September 2026	QA remediation — applied findings QA-218, QA-220, QA-238, QA-240, QA-241, QA-251, QA-253, QA-289, QA-291 (see QA change lo	AI Governance Lead

The Council — AIMS Statement of Applicability

AIG-AIMS-02 · v1.2 draft · Draft for Council review · OFFICIAL · ISO/IEC 42001:2023 Annex A

Purpose: record the applicability decision, justification, implementation position, owner and evidence route for all 38 Annex A controls.

Current position: all decisions are proposed. The suite provides design evidence only until formally approved, operated and supported by live records.

Control ID	Domain	Control title	Applicability	Applicability justification	Implementation status	Proposed control owner (role)	Existing suite design evidence	Live evidence / action still required	Evidence location	Target date	Last reviewed	Effectiveness	Decision QA	Exclusion approver (role / forum)	Exclusion approval date	Exclusion review trigger
A.2.2	A.2 Policies related to AI	AI policy	Applicable	The proposed AIMS covers Council development, procurement and use of AI and therefore requires an approved policy framework.	Designed - draft	Executive Sponsor / AI Governance Lead	AIG-GOV-02 §§5.2-5.3; AIG-ASS-03; AIG-AIMS-01 §§1-2.	Formally approve the policy, confirm leadership commitment and retain approval, communication and review evidence.				Not assessed	Complete			
A.2.3	A.2 Policies related to AI	Alignment with other organisational policies	Applicable	AI governance must operate consistently with Council data, security, procurement, HR, equality, legal and risk policies.	Designed - partial	AI Governance Lead / Corporate Policy Owners	AIG-GOV-02 §§5.2 and 5.4-5.11; AIG-GOV-03; AIG-AIMS-01 §§6, 8-9.	Complete and approve a cross-policy alignment review, record conflicts and track amendments to affected corporate policies.				Not assessed	Complete			
A.2.4	A.2 Policies related to AI	Review of the AI policy	Applicable	The AI policy must remain suitable as Council services, technology, law, risks and interested-party needs change.	Designed - partial	AI Assurance Board / AI Governance Lead	AIG-GOV-02 §§6 and 7.7; AIG-OPS-05; AIG-AIMS-01 §10.	Approve the review cadence and triggers, conduct the first review and retain minutes, decisions, changes and effectiveness evidence.				Not assessed	Complete			
A.3.2	A.3 Internal organisation	AI roles and responsibilities	Applicable	Council-wide AI activity requires explicit accountability across governance, service, technical and specialist-control functions.	Designed - draft	Executive Sponsor / AI Governance Lead	AIG-GOV-02 §§3.4-3.6; AIG-DEC-03; AIG-GOV-06; AIG-AIMS-01 §§4 and 11.	Approve roles, memberships, delegations, deputies and RACI interfaces; retain appointment and competence evidence.				Not assessed	Complete			
A.3.3	A.3 Internal organisation	Reporting of concerns	Applicable	Staff, suppliers, residents and other affected parties need safe routes to raise concerns about Council AI activity.	Designed - partial	AI Governance Lead / Relevant Reporting Owner	AIG-GOV-02 §§5.4 and 6.8; AIG-INV-01; AIG-OPS-03; AIG-GOV-06 §7.	Define confidential and, where appropriate, anonymous concern routes; align with whistleblowing, complaints and safeguarding processes; test escalation.				Not assessed	Complete			
A.4.2	A.4 Resources for AI systems	Resource documentation	Applicable	Effective risk and lifecycle management depends on knowing the resources each in-scope AI system relies upon.	Designed - partial	Service Owner / AI Technical Lead	AIG-INV-03; AIG-INV-04; AIG-ASS-09; AIG-OPS-01.	Create and maintain a system-level resource inventory covering data, tools, compute, people, facilities, suppliers and dependencies.				Not assessed	Complete			
A.4.3	A.4 Resources for AI systems	Data resources	Applicable	In-scope systems may depend on Council, resident, staff, supplier and public datasets with material quality and rights risks.	Designed - partial	Data Owner / Service Owner	AIG-INV-03; AIG-ASS-02; AIG-ASS-05; AIG-ASS-09; AIG-ASS-11.	Populate dataset inventories with purpose, category, owner, provenance, quality, rights, retention, sensitivity, bias and change information.				Not assessed	Complete			
A.4.4	A.4 Resources for AI systems	Tooling resources	Applicable	Models, libraries, platforms, evaluation tools and integration components can affect security, reproducibility and performance.	Designed - partial	AI Technical Lead / Service Owner	AIG-ASS-08; AIG-ASS-09; AIG-ASS-11.	Record versions, owners, licensing, support, evaluation methods, dependencies, vulnerabilities and approved changes for tooling resources.				Not assessed	Complete			
A.4.5	A.4 Resources for AI systems	System and computing resources	Applicable	Hosting, compute, storage, networks and capacity constraints affect resilience, security and AI system performance.	Designed - partial	Technology Owner / Security Lead	AIG-ASS-08; AIG-ASS-09; AIG-ASS-11; AIG-OPS-01.	Maintain architecture, environment, capacity, resilience, hosting, access and material environmental-impact evidence for each system.				Not assessed	Complete			
A.4.6	A.4 Resources for AI systems	Human resources	Applicable	Council AI governance and operation depend on competent service, technical, oversight, assurance and supplier personnel.	Designed - partial	Service Owner / AI Governance Lead	AIG-GOV-02 §§3.5 and 7; AIG-INV-03; AIG-GOV-06; AIG-OPS-01.	Complete role-to-competence mapping, resource planning, training records, effectiveness checks, succession and specialist-capacity arrangements.				Not assessed	Complete			
A.5.2	A.5 Assessing impacts of AI systems	AI system impact assessment process	Applicable	Council AI may affect individuals, groups, services and wider society and requires a repeatable impact-assessment process.	Designed - draft	AI Governance Lead / Service Owner	AIG-GOV-02 Chapter 4; AIG-ASS-01; AIG-ASS-02; AIG-ASS-04 to AIG-ASS-07.	Approve assessment triggers, roles, methods, sign-off and reassessment criteria; complete assessments for live pilot systems.				Not assessed	Complete			
A.5.3	A.5 Assessing impacts of AI systems	Documentation of AI system impact assessments	Applicable	Impact decisions and mitigations must remain traceable through approval, operation, change, incident review and audit.	Designed - draft	Service Owner / AI Governance Lead	AIG-INV-04; AIG-ASS-04 to AIG-ASS-07; AIG-DEC-03; AIG-OPS-01.	Complete, approve, version and retain real impact assessments with evidence links, action closure and residual-risk acceptance.				Not assessed	Complete			
A.5.4	A.5 Assessing impacts of AI systems	Assessing AI system impact on individuals or groups of individuals	Applicable	Council services may affect residents, workers and groups with protected or vulnerable characteristics.	Designed - draft	Service Owner / DPO / Equality and Human Rights Leads	AIG-ASS-04; AIG-ASS-05; AIG-ASS-06; AIG-ASS-07; AIG-DEC-03.	Apply the templates to real systems, document affected groups and engagement, and verify mitigations and redress in operation.				Not assessed	Complete			
A.5.5	A.5 Assessing impacts of AI systems	Assessing societal impacts of AI systems	Applicable	Local-authority AI can create community, democratic, environmental, workforce and public-trust effects beyond direct users.	Designed - partial	Service Owner / AI Governance Lead	AIG-GOV-02 §§2.3, 4.4 and 5.3; AIG-ASS-04; AIG-ASS-07; AIG-ASS-10.	Strengthen the societal-impact method, including collective, environmental, economic, democratic, misuse and long-term dependency effects.				Not assessed	Complete			
A.6.1.2	A.6 AI system life cycle	Objectives for responsible development of AI system	Applicable	The scope includes Council development and material configuration, requiring explicit responsible-development objectives.	Designed - partial	Service Owner / Product Owner / AI Technical Lead	AIG-GOV-02 §§5.3 and 7.7; AIG-ASS-02; AIG-ASS-04; AIG-DEC-03.	Define measurable system-level development objectives, acceptance thresholds, owners and evaluation methods linked to AIMS objectives.				Not assessed	Complete			
A.6.1.3	A.6 AI system life cycle	Processes for responsible AI system design and development	Applicable	A repeatable design and development process is necessary where Council teams build, integrate or materially configure AI.	Designed - draft	Product Owner / AI Technical Lead / AI Governance Lead	AIG-GOV-02 §§3.7 and Chapters 4-5; AIG-ASS-03; AIG-ASS-09; AIG-OPS-01.	Adopt the lifecycle process in delivery methods and retain stage-gate, design-review, change-control and engagement records.				Not assessed	Complete			
A.6.2.2	A.6 AI system life cycle	AI system requirements and specification	Applicable	Functional, non-functional, legal, risk and responsible-AI requirements must be defined before procurement or build.	Designed - partial	Product Owner / Service Owner	AIG-INV-03; AIG-ASS-02; AIG-ASS-09; AIG-DEC-03; AIG-OPS-01.	Introduce controlled requirements and traceability records covering intended use, constraints, safeguards, performance and approval criteria.				Not assessed	Complete			
A.6.2.3	A.6 AI system life cycle	Documentation of AI system design and development	Applicable	Design choices, assumptions, components and changes must be explainable and traceable for assurance and incident investigation.	Designed - partial	AI Technical Lead / Product Owner	AIG-ASS-02; AIG-ASS-09; AIG-DEC-03; AIG-ASS-11.	Retain design records, architecture, data assumptions, component versions, interfaces, decisions, tests and controlled changes for real systems.				Not assessed	Complete			
A.6.2.4	A.6 AI system life cycle	AI system verification and validation	Applicable	AI systems require evidence that requirements are met and that performance is acceptable in the intended Council context.	Designed - partial	AI Technical Lead / Service Owner / Independent Reviewer	AIG-ASS-02; AIG-ASS-03; AIG-ASS-09; AIG-ASS-11; AIG-OPS-01.	Define test methods, independence, datasets, thresholds, fairness and robustness criteria, acceptance, defects and retest evidence.				Not assessed	Complete			
A.6.2.5	A.6 AI system life cycle	AI system deployment	Applicable	Approved AI must move into service through controlled readiness, sign-off, monitoring and rollback arrangements.	Designed - draft	Service Owner / AI Governance Lead / Technology Owner	AIG-INV-04; AIG-DEC-03; AIG-GOV-06; AIG-OPS-01.	Complete AIG-OPS-01 for real deployments and retain go/no-go, segregation, release, rollback, condition-closure and active-status evidence.				Not assessed	Complete			
A.6.2.6	A.6 AI system life cycle	AI system operation and monitoring	Applicable	Operational AI must remain within intended use and approved performance, risk and oversight conditions.	Designed - draft	Service Owner / System Owner	AIG-GOV-02 Chapter 6; AIG-INV-04; AIG-OPS-05; AIG-OPS-06; AIG-OPS-01.	Operate monitoring plans with thresholds, owners, drift/change triggers, user support, action records and periodic effectiveness results.				Not assessed	Complete			
A.6.2.7	A.6 AI system life cycle	AI system technical documentation	Applicable	Users, operators, assurance functions and suppliers require maintained technical information appropriate to their roles.	Designed - partial	AI Technical Lead / Service Owner	AIG-ASS-08; AIG-ASS-09; AIG-ASS-11; AIG-OPS-01.	Define the technical-documentation minimum, audience, ownership, versioning, access and update triggers; populate for live systems.				Not assessed	Complete			
A.6.2.8	A.6 AI system life cycle	AI system recording of event logs	Applicable	Event records support monitoring, traceability, security, investigation, complaints and evidence of human oversight.	Designed - partial	System Owner / Security Lead / Service Owner	AIG-ASS-09; AIG-OPS-03; AIG-ASS-11; AIG-OPS-01.	Define events, log content, access, retention, integrity, review and privacy requirements and demonstrate working logs for relevant systems.				Not assessed	Complete			
A.7.2	A.7 Data for AI systems	Data for development and enhancement of AI system	Applicable	AI development, configuration and continuous improvement may depend on data whose fitness and governance affect outcomes.	Designed - partial	Data Owner / AI Technical Lead	AIG-GOV-02 §§5.6 and Appendix A; AIG-ASS-02; AIG-ASS-05; AIG-ASS-09.	Adopt system-level data-management plans covering selection, use, protection, representativeness, change and enhancement data.				Not assessed	Complete			
A.7.3	A.7 Data for AI systems	Acquisition of data	Applicable	Council and supplier data acquisition creates rights, provenance, quality, bias, security and contractual considerations.	Designed - partial	Data Owner / Procurement / Service Owner	AIG-INV-03; AIG-ASS-05; AIG-ASS-08; AIG-ASS-09.	Document acquisition source, authority, terms, purpose, selection, metadata, known limitations and supplier evidence for each dataset.				Not assessed	Complete			
A.7.4	A.7 Data for AI systems	Quality of data for AI systems	Applicable	Poor, incomplete, outdated or unrepresentative data could lead to unfair or unreliable Council service outcomes.	Designed - partial	Data Owner / Service Owner	AIG-ASS-02; AIG-ASS-04; AIG-ASS-05; AIG-ASS-09; AIG-ASS-11.	Set measurable quality and representativeness criteria, test them, record exceptions and monitor production-data change and impact.				Not assessed	Complete			
A.7.5	A.7 Data for AI systems	Data provenance	Applicable	Traceable data origin and transformations are necessary for legal assurance, reproducibility, bias review and incident response.	Designed - partial	Data Owner / AI Technical Lead	AIG-ASS-05; AIG-ASS-08; AIG-ASS-09.	Maintain lineage from acquisition through preparation, transfer, version, use and retirement with evidence references and owners.				Not assessed	Complete			
A.7.6	A.7 Data for AI systems	Data preparation	Applicable	Cleaning, labelling, transformation, augmentation and feature preparation can materially affect AI performance and fairness.	Designed - partial	Data Owner / AI Technical Lead	AIG-ASS-02; AIG-ASS-09; AIG-ASS-11.	Define permitted preparation methods, validation and approval; retain code, versions, rationale, quality checks and reproducibility evidence.				Not assessed	Complete			
A.8.2	A.8 Information for interested parties	System documentation and information for users	Applicable	Council staff and residents require accessible information to use or interact with AI safely and understand its limits.	Designed - draft	Service Owner / Product Owner / Communications	AIG-INV-01; AIG-ASS-09; AIG-ASS-10; AIG-OPS-01.	Produce, user-test, publish and maintain audience-appropriate instructions, limitations, oversight, accessibility and support information.				Not assessed	Complete			
A.8.3	A.8 Information for interested parties	External reporting	Applicable	Affected people and external stakeholders need routes to report concerns, adverse effects, complaints and unintended outcomes.	Designed - partial	Service Owner / Complaints Owner / AI Governance Lead	AIG-ASS-10; AIG-OPS-05; AIG-OPS-03; AIG-AIMS-01 §7.	Define public reporting routes, accessibility, triage, investigation, acknowledgement, response targets, learning and record linkage.				Not assessed	Complete			
A.8.4	A.8 Information for interested parties	Communication of incidents	Applicable	AI incidents may require timely, accurate communication to residents, users, partners, leadership or competent authorities.	Designed - partial	Incident Lead / Service Owner / Communications	AIG-GOV-02 §6.8; AIG-OPS-03; AIG-GOV-06 §7; AIG-OPS-01.	Approve an incident-communication plan covering decisions, audiences, channels, timeframes, accessibility, legal review and evidence.				Not assessed	Complete			
A.8.5	A.8 Information for interested parties	Information for interested parties	Applicable	The Council has transparency, contractual, governance and public-accountability obligations for in-scope AI systems.	Designed - partial	AI Governance Lead / Service Owner / Communications	AIG-ASS-10; AIG-OPS-05; AIG-AIMS-01 §§7-8.	Validate reporting obligations by interested party, owner, content, timing, channel, restriction, evidence and review date.				Not assessed	Complete			

A.9.2	**A.9 Use of AI systems**	Processes for responsible use of AI systems	Applicable	Council personnel and suppliers require clear operational processes for safe, lawful and accountable AI use.	**Designed - draft**	Service Owner / AI Governance Lead	AIG-GOV-02 §§5.3-5.4; AIG-INV-01; AIG-ASS-03; AIG-OPS-01.	Adopt operational procedures, deliver role-based training and retain supervision, exception, pause and enforcement evidence.				Not assessed	Complete			
A.9.3	**A.9 Use of AI systems**	Objectives for responsible use of AI system	Applicable	Responsible-use principles must be translated into measurable expectations for each operational AI context.	**Designed - partial**	Service Owner / AI Governance Lead	AIG-GOV-02 §§3.11 and 5.3; AIG-ASS-02; AIG-ASS-04; AIG-OPS-01.	Set measurable responsible-use objectives, thresholds and evaluation methods and link results to AIMS objectives and governance review.				Not assessed	Complete			
A.9.4	**A.9 Use of AI systems**	Intended use of the AI system	Applicable	Use outside an approved purpose, population or environment may create new risks and require reassessment.	**Designed - draft**	Service Owner / System Owner	AIG-INV-03; AIG-INV-04; AIG-ASS-09; AIG-DEC-03; AIG-OPS-01.	Confirm intended-use statements, user controls and monitoring; detect scope creep and trigger material-change review and reapproval.				Not assessed	Complete			
A.10.2	**A.10 Third-party and customer relationships**	Allocation of responsibilities	Applicable	Council AI delivery may involve suppliers, partners, shared services and service recipients with interdependent responsibilities.	**Designed - draft**	Service Owner / Procurement / Legal Services	AIG-ASS-08; AIG-DEC-03; AIG-GOV-06; AIG-OPS-01; AIG-AIMS-01 §4.	Record and approve lifecycle responsibilities, escalation, evidence, incident, change, data, monitoring, communication and exit obligations.				Not assessed	Complete			
A.10.3	**A.10 Third-party and customer relationships**	Suppliers	Applicable	The Council may rely on suppliers for models, data, platforms, hosting, assurance, changes and incident remediation.	**Designed - draft**	Procurement / Service Owner / Security Lead	AIG-ASS-08; AIG-ASS-11; AIG-OPS-01.	Apply due diligence and contract controls to real procurements; monitor evidence, material changes, incidents, performance and exit readiness.				Not assessed	Complete			
A.10.4	**A.10 Third-party and customer relationships**	Customers	Applicable	For this public-sector AIMS, the concept includes recipients of Council-provided AI-enabled services and relevant partner organisations.	**Designed - partial**	Service Owner / Legal Services / Communications	AIG-ASS-08; AIG-ASS-10; AIG-OPS-05; AIG-AIMS-01 §§4 and 7.	Confirm the Council-specific interpretation, identify applicable recipient obligations and evidence how they affect provision and use decisions.				Not assessed	Complete			

AIG-AIMS-02 — Lists, Status Definitions and Use Guidance

Applicability	Meaning
Applicable	Control is included in the AIMS risk-treatment design.
Not applicable	Control is excluded with a documented, approved and reviewable justification.
To be determined	Decision is awaiting scope, risk, legal, technical or governance evidence.

Implementation status	Evidence threshold
Not assessed	No reliable assessment has been completed.
Designed - partial	Some design content exists, but coverage or control mechanics are incomplete.
Designed - draft	The control is designed in controlled draft documentation but is not approved or operational.
Approved	An authorised body has approved the control and its owner/resources.
Implemented	The control is operating in the AIMS scope.
Evidenced	Records demonstrate implementation over a suitable period or event cycle.
Effective	Monitoring, audit or review demonstrates the control achieves its intended outcome.
Not applicable	The control is excluded through the approved applicability decision.

Effectiveness	Meaning
Not assessed	No effectiveness conclusion.
Ineffective	Control does not achieve its intended outcome.
Partially effective	Control works only in part or inconsistently.
Effective	Evidence supports the intended outcome.

Decision and evidence rules

- Applicability is determined from the approved AIMS scope, AI risks, impact assessment and applicable requirements; it is not a generic tick-box decision.
- A Not applicable decision requires a specific justification, named approver, date and review trigger (SoA Register columns E and O to Q); Decision QA flags any missing element or a status that conflicts with the applicability decision.
- Existing suite references show design coverage only. They are not proof that a control is approved, implemented or effective.
- Evidence locations should point to controlled records, not merely repeat a document title.
- Status should advance only when the stated evidence threshold is met and can be sampled by an auditor.
- Changes to scope, risk, systems, suppliers, law, incidents or audit findings may require SoA reassessment.

Source and controlled-use note

Standard baseline: ISO/IEC 42001:2023, Information technology — Artificial intelligence — Management system.
Official standard page: https://www.iso.org/standard/42001
Control identifiers and titles are provided as a working implementation reference. Before formal adoption or certification use, the Council shall validate them and all decisions against its licensed copy of the standard.
Council design sources: AI Governance Playbook (AIG-GOV-02, current controlled version per AIG-GOV-03) and the controlled AIG-* artefacts listed in the Artefact Index (AIG-GOV-03).

AIG-AIMS-02 — PROPOSED AIG-INV-04/AIG-DEC-04 INTEGRATION NOTES

NOT APPROVED — additive integration annex only; existing workbook content and formulas are retained unchanged. AIG-INV-04 (AI Register) and AIG-DEC-04 (Gate Log) are themselves proposed designs: until the Council approves their adoption and migration, the Council's existing records remain authoritative and the AIG-INV-04/AIG-DEC-04 joins below are design references only. No live system, event, evidence, approval or Council decision is asserted.

Review topic	Targeted proposed integration note
Status / boundary	This sheet is an additive proposed crosswalk only. Keep every existing SoA control ID, applicability choice, justification, status, owner and evidence/action cell unchanged; this annex does not approve or operate an Annex A control.
System-level relationship	Treat the SoA as an AIMS-level control-treatment decision, not a second system register. Where a control applies to an individual system, use its permanent AIR-ID as the join to proposed AIG-INV-04 AI Register and its Assessment summary; do not copy system facts or control evidence into the SoA.
AIG-INV-04 current-state join	Use AIG-INV-04 AI Register for the proposed system identity, Service Owner, purpose/boundary, lifecycle stage, approval and operational state. Assessment summary carries current assessment summary and pointers to assessment evidence. Keep the existing AIG-AIMS-02 control owner and licensed-standard validation responsibility distinct from the system Service Owner.
AIG-DEC-04 plan / event / condition join	For a system-specific gate, use the AIG-DEC-04 Gate plan for planned forum/requirement (Plan ID + AIR-ID), Gate events for dated events (Event ID + AIR-ID), and Conditions for each condition (Condition ID parented to Event ID). Link to the substantive decision in AIG-DEC-03/native minutes and to evidence metadata in the AIG-INV-04 Evidence index; do not treat a plan, event identifier, generic reference, or SoA design mapping as control implementation evidence.
Treatment / evidence linkage	Where an Annex A control is selected for treatment, retain its control ID, reason, responsible role, applicable requirement, system AIR-ID where relevant, and versioned Evidence ID/location in the authoritative control/evidence record. A source artefact citation identifies a candidate design route only; verification must establish that the named, current control is implemented for that AIR-ID.
Exceptions / change	If system facts, risk, purpose, supplier, data, autonomy, control coverage or applicable requirement change, retain the AIG-INV-04 Register change log entry and reassess. A governance decision or changed/waived condition belongs to its real AIG-DEC-04 event and authorised AIG-DEC-03/native record; never overwrite history or infer waiver authority from a status field.
Open adoption checks	Council reviewers must validate all 38 control titles and mappings against the licensed ISO/IEC 42001:2023, confirm the scope and accountable authority, approve applicability/justifications and control owners, define evidence locations, and agree the authorised AIG-INV-04/AIG-DEC-04 migration and crosswalk rules before making implementation or conformity claims.

PROPOSED QA INDEX — NOT APPROVED. A source reference does not establish applicability or compliance. See AIG-AIMS-05 and AIG-AIMS-13; owners must validate the current source, case-specific scope, control evidence and adopted status.

Requirement ID	Instrument / edition	Conditional scope / relevance	Source URL	Owner validation status
REQ-040	ISO/IEC 42001:2023 Artificial intelligence management system	Proposed management-system design mapping; licensed clause review and adoption needed.	https://www.iso.org/standard/42001	Specialist validation required
REQ-041	ISO/IEC 23894:2023 AI — Guidance on risk management	Voluntary risk-management guidance; proposed alignment, not statutory conformity.	https://www.iso.org/standard/77304.html	Specialist validation required
REQ-042	ISO/IEC 42005:2025 AI system impact assessment	Guidance for AI impact-assessment design; validate edition and selected use.	https://www.iso.org/standard/42005	Specialist validation required
REQ-043	ISO/IEC 42006:2025 requirements for bodies providing audit and certification of AIMS	Certification-body standard, not an automatic Council operational requirement.	https://www.iso.org/standard/42006	Specialist validation required
NIST-AI-100-1	NIST AI Risk Management Framework 1.0 (NIST AI 100-1, January 2023)	Voluntary alignment reference; not certification or statutory conformity	https://www.nist.gov/publications/artificial-intelligence-risk-management-framework-ai-rmf-10	Voluntary alignment reference; not certification or statutory conformity

AIG-AIMS-02 / PROPOSED THREE-ARTEFACT SOURCE CONTRACT

Status	PROPOSED INTEGRATION DESIGN ONLY. This sheet does not amend the artefact's native assessment, decision authority, data or formulas.
Role of this file	Control applicability: A control design mapping is not evidence of implementation. Use exact AIR-ID and evidence/decision pointers when case-specific, with AIG-INV-04 current state and separate AIG-DEC-04 decision-event sources.
AIG-INV-04 source	Separate AIG-INV-04 AI Register: official AIR-ID, current position, in-file Assessment summary/Evidence index. Reconcile against authoritative AIG-INV-04 before using a copied value.
AIG-DEC-04 source	Separate AIG-DEC-04 Gate Log: prospective Gate plan, dated Gate events, event-linked Conditions. A planned gate is not a decision. A decision requires AIG-DEC-03 or approved minutes and proper delegation.
Map source	Proposed standalone Capabilities and System Map (candidate catalogue ID AIG-INV-05): UC/CAP and component relationship pointers. Edge ID is not an approval or permission; AIG-AGT-04/AIG-AGT-05 remain sources of agent scope/authority.
Data exchange	Use controlled AIR-ID across files. Where applicable reference exact Event ID, Condition ID, Evidence ID, AG-ID and Edge ID. Record source file/version/as-at with imported or quoted evidence; no live cross-workbook formula is assumed.
Change trigger	New or expanded system/tool access, or a material model, data, interface, purpose or agent change: log the map change, obtain owner reassessment and escalate to the proper AIG-DEC-04 gate/AIG-DEC-03 decision when required.
Validation before use	The INTEGRATION INV-04 DEC-04 tab in this workbook is current supporting design guidance (not historical) and holds the detailed join notes. Controlled owners must reconcile real records, validate values and formulas in Excel, and approve migration/cutover; existing Council records remain unchanged until then.
