The Council — AIMS Objectives, Risk Treatment and Improvement Plan

AIG-AIMS-03 · v1.2 draft · Draft for Council review · OFFICIAL · ISO/IEC 42001:2023

Purpose: translate the proposed AIMS scope and control design into measurable objectives, treated risks, opportunities and controlled implementation actions.

Status statement: all objectives, risk scores, treatments, opportunities and improvement actions are proposed starting positions. The Council must validate and approve owners, resources, baselines, targets, dates and risk decisions before use.

Document control	Controlled value
Document ID	AIG-AIMS-03
Version	1.2 draft
Status	Draft for Council review
Document owner	AI Governance Lead
Approving authority	To be confirmed under Council delegations
Effective date	Pending formal approval
Review frequency	Monthly during implementation; at least quarterly thereafter
Source position	Governance Playbook (AIG-GOV-02, current controlled version per AIG-GOV-03)
Classification	OFFICIAL

Objective readiness	
Measure	Result
Proposed objectives	8
Approved / active	0

Planned	1
In progress	0
Blocked	0
Complete	0
Cancelled	0

Recommended adoption sequence
1. Confirm accountable ownership, approval authority and the proposed AIMS scope (AIG-AIMS-01).
2. Validate the 38 Annex A decisions against the Council's licensed standard and approve AIG-AIMS-02.
3. Approve policy, objectives, risk criteria, risk acceptance and the implementation programme.

4. Establish roles, competence, applicable requirements, inventory completeness and controlled evidence arrangements.
5. Pilot the full lifecycle, supplier controls and monitoring on representative real AI systems.
6. Exercise incident and corrective-action processes, then conduct the first internal audit.
7. Complete management review; update objectives, risks, SoA and improvement priorities from evidence.

Version	Date	Change	Author / owner
1.0 draft	07/08/2026	Initial AIMS objectives, risk treatment, opportunities and improvement plan mapped to the AI Governance Playbook (AIG-GOV-02), AIG-AIMS-01 and AIG-AIMS-02.	AI Governance Lead
1.1 draft	28 September 2026	Correct risk-tier boundaries, residual-rating thresholds and objective QA colours.	
1.2 draft	29 September 2026	QA remediation — applied findings QA-074, QA-214, QA-218, QA-22C	AI Governance Lead

The Council — AIMS Objectives Register

AIG-AIMS-03 · v1.2 draft · Draft for Council review · OFFICIAL

Purpose: define proposed measurable AIMS objectives, owners, evidence, review arrangements and progress.

Current position: the eight entries are draft management-system objectives. Baselines, targets, dates, resources and approval must be validated before they become Council commitments.

Objective ID	Objective statement	Intended outcome	ISO / SoA links	Related AIMS risks	Measure	Baseline	Proposed target	Target date	Proposed owner	Supporting roles	Review cadence	Evidence source	Status	Current performance	Progress %	Last reviewed	Decision / next action	Record QA
OBJ-01	Maintain a complete and current inventory of in-scope AI activity.	Leadership has reliable visibility of every Council AI use, its owner, lifecycle status and governance tier.	ISO 6.2; A.4.2; A.8.5; A.9.2	R-02, R-03	Percentage of known in-scope AI systems with a valid AI Register ID, accountable owner, AGPI tier, lifecycle status and review date.	Not established — inventory completeness review required.	Proposed: 100% of known in-scope systems complete; quarterly completeness checks and documented shadow-AI follow-up.		AI Governance Lead	Service Owners; Digital, Data; Procurement; Security; Internal Audit	Monthly during implementation; quarterly when established	AIG-INV-04 AI Register, AIG-OPS-06 Dashboard; completeness-review records	Draft	Not measured	0%		Approve the metric definition, data owner, completeness-testing method and target date.	Complete
OBJ-02	Apply proportionate governance and approval before AI deployment or material change.	AI systems progress through traceable, risk-tiered decisions with conditions closed before operational use.	ISO 6.2, 8.1; A.5.2-A.5.5; A.6.2.2-A.6.2.6; A.9.2	R-01, R-03, R-04	Percentage of high/critical cases with complete required assessments, authorised decision record and no open critical go-live condition.	Not established — live case baseline required.	Proposed: 100% before go-live or material change; zero operational systems with an unresolved critical approval condition.		AI Governance Lead / Service Owner	Governance bodies; Legal; DPO; Equality; Security; Procurement	At every decision gate; monthly portfolio review	AIG-INV-03, AIG-INV-04, AIG-ASS-01, AIG ASS-02, AIG-ASS-03, AIG-ASS-04, AIG-ASS-05, AIG-ASS-06, AIG-ASS-07, AIG-ASS-08, AIG-ASS-09.	Draft	Not measured	0%		Validate the decision thresholds, exception route, approval authority and reporting frequency.	Complete
OBJ-03	Identify and manage impacts on residents, staff, communities and protected or vulnerable groups.	Material privacy, equality, human-rights, safeguarding and societal impacts are assessed and treated before approval and monitored in use.	ISO 6.2; A.5.2-A.5.5; A.8.2-A.8.5	R-06, R-07, R-08, R-13	Percentage of cases triggering DPIA, Equality Impact Assessment, Human Rights Assessment or Responsible AI Assessment completed, approved and linked to the AI Register.	Not established — assessment population and baseline required.	Proposed: 100% of triggered assessments completed before approval; all material actions assigned and tracked to closure.		Service Owner / AI Governance Lead	DPO; Equality and Human Rights Leads; Legal; Safeguarding; Communications	At intake, before approval and on material change	AIG-ASS-04 to AIG-ASS-07, AIG-DEC-03; AIG-OPS-05; action records	Draft	Not measured	0%		Confirm assessment triggers, specialist sign-off roles, action ownership and evidence retention.	Complete
OBJ-04	Assure data, technical, security and operational readiness for production AI.	AI systems operate within approved data, performance, resilience, security and change-control parameters.	ISO 6.2, 8.1; A.4.2-A.4.6; A.6.2.2-A.6.2.3; A.7.2-A.7.6	R-07, R-10, R-11, R-15	Percentage of production systems with approved data controls, verification/validation, security review, deployment plan, monitoring thresholds and rollback or exit arrangements.	Not established — production-system baseline required.	Proposed: 100% of production systems meet the applicable readiness set; zero unresolved critical security or validation finding at go-live.		Service Owner / AI Technical Lead	Data Owner; Security; Architecture; Information Governance; Supplier Owner	Before go-live; monthly or risk-based operational review	AIG-ASS-02; AIG-ASS-09; AIG-ASS-11; AIG-OPS-01; test and monitoring evidence	Draft	Not measured	0%		Agree the minimum readiness set by risk tier and establish evidence owners for each live system.	Complete
OBJ-05	Provide effective human oversight, transparency, challenge and redress.	People affected by Council AI can understand relevant use, obtain appropriate human consideration and raise concerns safely.	ISO 6.2; A.5.4; A.8.2-A.8.5; A.9.2-A.9.4	R-08, R-12	Percentage of applicable systems with tested human-oversight and override arrangements, accessible user information, complaint routes and response monitoring.	Not established — applicability and baseline review required.	Proposed: 100% of applicable systems; all material complaints and oversight failures investigated and actioned within approved timescales.		Service Owner / Communications	AI Governance Lead; Complaints; Legal; Equality; Frontline Teams	Before go-live; quarterly and after material complaint or incident	AIG-ASS-09, AIG-ASS-10; AIG-OPS-05; AIG-OPS-03; user testing and complaint records	Draft	Not measured	0%		Define applicability, accessibility standards, service-response times and oversight-effectiveness measures.	Complete
OBJ-06	Control AI supplier, partner and shared-service dependencies.	Third-party AI responsibilities, evidence, change, incident, resilience and exit obligations are understood and enforceable.	ISO 6.2; A.10.2-A.10.4	R-09, R-10, R-15	Percentage of material AI suppliers with completed due diligence, approved contractual controls, evidence access, change notification, incident support and exit plan.	Not established — contract and supplier baseline required.	Proposed: 100% before contract, renewal or material change; all critical supplier gaps resolved or formally accepted.		Procurement / Service Owner	Legal; Security; DPO; AI Governance Lead; Commercial and Contract Owners	At procurement, renewal and material supplier change; quarterly portfolio review	AIG-ASS-08; AIG-ASS-11; contracts; supplier review and assurance records	Draft	Not measured	0%		Confirm the material-supplier population, mandatory clauses, acceptance authority and assurance cadence.	Complete
OBJ-07	Detect, respond to and learn from AI incidents, concerns, performance deterioration and control failures.	Potential harm is contained promptly and recurring causes drive corrective action and control improvement.	ISO 6.2, 9.1, 10.1-10.2; A.3.3; A.6.2.6-A.6.2.8; A.8.3-A.8.4	R-11, R-12, R-14	Percentage of AI incidents and material control exceptions triaged within approved timescale, root-caused where required and closed with effectiveness evidence.	Not established — incident taxonomy and baseline required.	Proposed: 100% triaged within approved severity timescales; 100% material corrective actions tracked to verified closure.		Incident Lead / AI Governance Lead	Service Owners; Security; DPO; Legal; Complaints; Communications	Per incident; monthly trend review; quarterly governance review	AIG-OPS-05; AIG-OPS-06, AIG-OPS-03; incident, action and lessons-learned records	Draft	Not measured	0%		Align severity, notification, escalation, investigation and effectiveness criteria with Council incident processes.	Complete
OBJ-08	Establish an effective, competent and continually improving AIMS.	The management system is approved, resourced, audited, reviewed and improved on evidence rather than policy intent alone.	ISO 5.10; A.2.2-A.2.4; A.3.2; A.4.6	R-01, R-04, R-05, R-13, R-14	Completion of approved AIMS programme, role-based competence, internal audit, management review and improvement actions by agreed dates.	Design suite exists; operational baseline and effectiveness evidence not established.	Proposed: all governance roles appointed and trained, annual internal audit and management review completed; 100% critical/high actions closed by target or formally escalated.		Executive Sponsor / AI Governance Lead	AI Assurance Board; Internal Audit; HR/L&D; Legal; Risk; all control owners	Monthly implementation review; at least annual audit and management review	AIG-GOV-02, AIG-OPS-05; AIG-OPS-06; AIG-GOV-08; AIG-AIMS-01 to AIG-AIMS-03; audit and review records	Draft	Not measured	0%		Approve the AIMS programme, resources, competence plan, audit programme and management-review calendar.	Complete

The Council — AIMS Risk Treatment Plan

AIG-AIMS-03 · v1.2 draft · Draft for Council review · OFFICIAL

Purpose: maintain AIMS-level risks, provisional inherent assessment, proposed treatment, ownership, evidence and residual-risk review.

Current position: scores and treatments are a desk-review starting point only. Validate them in a Council risk workshop and do not enter a control-effectiveness (CE) score until treatment implementation and evidence have been reviewed. Residual score = inherent score × CE factor (CE ÷ 5), per Playbook §4.4.3; the effective tier stays at the inherent tier until controls are evidenced, and a reduction from High or Critical also needs independent verification.

Risk ID	Risk scenario	Cause / current gap	Potential consequence	Source	ISO / Annex A links	Inherent likelihood	Inherent impact	Inherent score	Inherent rating	Treatment option	Treatment / control action	Proposed owner	Status	Target date	Control effectiveness (CE 1-5; 1 very strong, 5 ineffective)	CE factor (CE ÷ 5)	Residual score	Residual rating	Related objective(s)	SoA control links	Evidence / record	Review trigger	Record QA
R-01	The AIMS remains unapproved or is treated as operational before formal adoption.	Scope, policy, authority, objectives and control decisions are still draft.	Unclear accountability, inconsistent decisions, unsupported conformity claims and inability to demonstrate effective governance.	Suite QA; AIG-AIMS-01 and AIG-AIMS-02 draft status	ISO 4.4, 5.1-5.3, 6.2; A.2.2-A.2.4	4	5	20	Critical	Modify	Confirm adopting authority and accountable owner; approve scope, policy, objectives, risk criteria and SoA; communicate effective date and transition plan.	Executive Sponsor / AI Governance Lead	Treatment planned						OBJ-02, OBJ-08	A.2.2-A.2.4; A.3.2	Approval, communication and controlled-document records	Change in leadership, delegations, scope or certification intent	Complete
R-02	AI activity is omitted from the inventory, including embedded, pilot, supplier or shadow AI.	Distributed ownership and inconsistent discovery, registration and procurement triggers.	Unassessed systems may process data or affect services without ownership, controls, monitoring or approval.	AIG-AIMS-01 internal context; inventory completeness not evidenced	ISO 4.1, 6.1, 8.1; A.4.2; A.9.2	4	5	20	Critical	Modify	Run a Council-wide inventory baseline and shadow-AI campaign; integrate registration triggers into procurement, digital delivery, security and data processes; test completeness periodically.	AI Governance Lead / Service Owners	Treatment planned						OBJ-01	A.4.2; A.8.5; A.9.2	AI Register, discovery results, reconciliation and exception records	New service, procurement, embedded feature or audit finding	Complete
R-03	Governance evidence and decisions become fragmented across boards, tools and lifecycle stages.	Multiple approval interfaces and inconsistent use of a single AI Register ID and evidence links.	Conditions, actions or material facts may be lost, duplicated or contradicted, allowing premature deployment or weak auditability.	AIG-AIMS-01 distributed ownership/evidence context	ISO 7.5, 8.1, 9.1; A.6.2.3; A.8.5	4	4	16	Critical	Modify	Mandate one AI Register ID; controlled decision record and evidence index across all gates; define hand-offs, action closure and register-update accountability.	AI Governance Lead / Governance Secretariat	Treatment planned						OBJ-01, OBJ-02	A.3.2; A.6.2.3; A.8.5	Register audit trail, decision records, minutes and evidence links	Any gate transfer, ownership change, material condition or audit exception	Complete
R-04	Roles, delegations or approval authorities are unclear or conflict with Council governance.	Proposed governance bodies and responsibilities have not been formally appointed and aligned to delegations.	Decisions may lack authority; specialist accountability may be bypassed; escalation and ownership may fail.	AIG-GOV-06 and AIG-AIMS-01 adoption decisions pending	ISO 5.3, 7.1; A.3.2	3	5	15	High	Modify	Approve Terms of Reference, delegations, membership, deputies, conflicts process and RACI interfaces; retain appointment and decision-authority evidence.	Executive Sponsor / Monitoring Officer	Treatment planned						OBJ-02, OBJ-08	A.3.2; A.10.2	Approved governance documents, appointments and delegations	Organisational restructure, delegation change or disputed decision	Complete
R-05	Insufficient competence or capacity causes inconsistent AI governance and control operation.	Variable AI literacy and limited specialist capacity across services and assurance functions.	Risk signals may be missed, documentation may be poor and governance may create delay or unsafe shortcuts.	AIG-AIMS-01 capability and capacity issue	ISO 7.1-7.3; A.4.6	4	4	16	Critical	Modify	Complete role-to-competence mapping, resource plan, role-based training and effectiveness checks; establish specialist escalation and succession arrangements.	AI Governance Lead / HR-L&D	Treatment planned						OBJ-08	A.3.2; A.4.6	Competence matrix, training records, assessments and resource decisions	New role, control failure, audit finding or material workload change	Complete
R-06	Material impacts on people or communities are not identified or treated before use.	Impact assessment triggers, participation and specialist reviews are not consistently applied to live cases.	Unfair, unlawful, inaccessible or harmful outcomes and weakened public trust or legal defensibility.	AIG-ASS-04 to AIG-ASS-07 are controlled templates; live application not yet evidenced	ISO 6.1, 8.1; A.5.2-A.5.5	3	5	15	High	Modify	Validate assessment triggers; complete and approve assessments for priority systems; engage affected groups proportionately; track mitigations and residual-risk acceptance.	Service Owner / AI Governance Lead	Treatment planned						OBJ-03	A.5.2-A.5.5; A.8.3-A.8.5	Approved assessments, engagement, decisions and action closure	New affected group, complaint, material change or adverse outcome	Complete
R-07	Poor data quality, provenance, representativeness or preparation undermines AI outcomes.	System-level data controls and evidence have not been validated across live systems.	Inaccurate, biased or unreliable outputs; inability to reproduce decisions or investigate incidents.	AIG-ASS-02, AIG-ASS-05 and AIG-ASS-09 design controls; operational evidence required	ISO 6.1, 8.1; A.7.2-A.7.6	4	4	16	Critical	Modify	Create dataset inventories and data-management plans; set measurable quality and representativeness criteria; retain provenance, preparation, approval and monitoring evidence.	Data Owner / Service Owner	Treatment planned						OBJ-03, OBJ-04	A.4.3; A.7.2-A.7.6	Dataset records, tests, lineage, exceptions and monitoring	Dataset, purpose, population, supplier or preparation change	Complete
R-08	Human oversight, transparency, challenge or redress is ineffective.	Oversight design, instructions and public information may be generic or untested.	People may be unable to understand, contest or correct AI-supported decisions; harmful automation bias may persist.	AIG-ASS-09, AIG-ASS-10 and AIG-OPS-03 require live validation	ISO 6.1, 8.1; A.5.4; A.8.2-A.8.5; A.9.2-A.9.4	3	5	15	High	Modify	Define and test oversight, pause/override and escalation; publish accessible information; integrate complaints and redress; monitor oversight use and effectiveness.	Service Owner / Communications	Treatment planned						OBJ-03, OBJ-05	A.5.4; A.8.2-A.8.5; A.9.2-A.9.4	User tests, oversight logs, complaints, decisions and corrections	Complaint, override failure, user research or material service change	Complete
R-09	Supplier or partner dependencies are accepted without sufficient assurance or enforceable obligations.	Due diligence, contracts and evidence access have not been tested consistently on material live suppliers.	Hidden model/data risks, unnotified change, delayed incident support, lock-in or ineffective exit.	AIG-ASS-08 and AIG-ASS-11 design controls; supplier baseline required	ISO 6.1, 8.1; A.10.2-A.10.4	4	4	16	Critical	Modify	Baseline material suppliers; apply due diligence and mandatory contract controls; set review cadence, evidence rights, change/incident notification, resilience and exit obligations.	Procurement / Service Owner	Treatment planned						OBJ-06	A.10.2-A.10.4; A.4.4-A.4.5	Due diligence, contracts, assurance reviews and exit tests	Procurement, renewal, supplier change, incident or performance failure	Complete
R-10	AI security, privacy or misuse controls are inadequate for the system and threat context.	AI-specific threat modelling, access, logging and supplier controls are not evidenced for all priority systems.	Data leakage, manipulation, unauthorised use, service disruption, compromised outputs or regulatory breach.	AIG-ASS-11 controlled checklist; live security evidence required	ISO 6.1, 8.1; A.4.4-A.4.5; A.6.2.4-A.6.2.8	3	5	15	High	Modify	Perform risk-tiered security and privacy reviews; define technical controls, abuse testing, logging, vulnerability handling and go-live closure criteria.	Security Lead / Service Owner	Treatment planned						OBJ-04, OBJ-06	A.4.4-A.4.5; A.6.2.4-A.6.2.8; A.10.3	Threat model, test results, security decision and monitoring	Threat, vulnerability, architecture, model or hosting change	Complete
R-11	Performance deterioration, drift or material change is not detected and reassessed.	Operational thresholds, ownership and material-change triggers are not yet operating across the portfolio.	Systems may remain in use outside approved performance, risk, purpose or data conditions.	AIG-OPS-05, AIG-OPS-06 and AIG-OPS-01 require live monitoring records	ISO 8.1, 9.1; A.6.2.6-A.6.2.8	4	4	16	Critical	Modify	Approve system monitoring plans and thresholds; assign review owners; connect alerts and material changes to pause, investigation, reapproval and register update.	System Owner / Service Owner	Treatment planned						OBJ-04, OBJ-07	A.6.2.6-A.6.2.8; A.8.4	Monitoring logs, alerts, reviews, changes and reapproval	Threshold breach, drift, supplier update or scope change	Complete
R-12	AI incidents, complaints or concerns are not escalated, investigated or converted into corrective action.	Reporting routes and incident workflow have not been exercised end to end.	Continuing harm, missed notification, repeated failures and loss of trust or learning.	AIG-OPS-03 design form; exercise and live records required	ISO 7.4, 10.1-10.2; A.3.3; A.8.3-A.8.4	3	5	15	High	Modify	Align incident taxonomy and routes; run a tabletop exercise; confirm authority, communications and notifications; track root cause, corrective action and effectiveness.	Incident Lead / AI Governance Lead	Treatment planned						OBJ-05, OBJ-07	A.3.3; A.8.3-A.8.4	Exercise report, incident records, actions and effectiveness checks	Incident, complaint, near miss, control failure or external report	Complete
R-13	Applicable legal, regulatory, contractual or Council requirements are incomplete or outdated.	No single validated AIMS obligations and change record has yet been evidenced.	Controls and decisions may rely on obsolete or incomplete requirements, creating non-compliance or rework.	AIG-AIMS-01 section 8 requires a controlled requirements record	ISO 4.2, 6.1, 9.1; A.2.3; A.8.5	3	5	15	High	Modify	Establish the AIMS applicable-requirements register with authoritative owners, sources, applicability, affected controls, review cadence and change assessment.	Legal Services / AI Governance Lead	Treatment planned						OBJ-03, OBJ-08	A.2.3; A.8.5; A.10.2-A.10.4	Requirements register, legal review and change records	Legal, regulatory, policy, contract or service change	Complete
R-14	The Council cannot demonstrate AIMS effectiveness because internal audit and management review are not operating.	Current evidence is primarily controlled design documentation rather than sampled operational records.	Weak assurance, recurring gaps and unsupported certification or leadership claims.	AIG-AIMS-02 shows zero controls implemented/evidenced/effective	ISO 9.1-9.3, 10.1-10.2	4	4	16	Critical	Modify	Approve internal audit and management review programmes; define evidence thresholds; conduct the full cycle; track findings, corrective actions and effectiveness.	AI Assurance Board / Internal Audit	Treatment planned						OBJ-07, OBJ-08	A.2.4; A.5.3; A.6.2.3	Audit reports, management review, actions and verified closure	Audit plan, management review, major incident or recurring finding	Complete
R-15	AI systems or supplier dependencies are retired or exited without controlled records, continuity or data handling.	Retirement, archival, replacement and supplier-exit controls are not evidenced across real systems.	Service disruption, retained access/data, lost audit trail, unmanaged dependency or re-emergence of retired use.	AIG-OPS-01 deployment and live-control design; exit evidence required	ISO 8.1; A.4.2-A.4.5; A.6.2.3; A.10.2-A.10.3	3	4	12	High	Modify	Define decommissioning and exit criteria; revoke access, manage data/records, update the AI Register, validate replacement/continuity and retain closure evidence.	Service Owner / Technology Owner	Treatment planned						OBJ-04, OBJ-06	A.4.2-A.4.5; A.6.2.3; A.10.2-A.10.3	Retirement plan, access/data closure, register and contract records	Retirement decision, supplier exit, replacement or service transfer	Complete

The Council — AIMS Opportunities Register

AIG-AIMS-03 · v1.2 draft · Draft for Council review · OFFICIAL

Purpose: record opportunities that can improve AIMS effectiveness, efficiency, integration and public value.

Current position: these opportunities are proposed for evaluation. Benefits, resources, owners and dates must be approved before commitment.

Opportunity ID	Opportunity	Expected benefit	Enablement / action	Related objective(s)	ISO / SoA links	Proposed owner	Priority	Status	Target date	Evidence / indicator	Review trigger	Record QA
OPP-01	Use one AI Register ID as the continuous governance thread across every lifecycle stage and board.	Less fragmentation, faster evidence retrieval, clearer ownership and safer hand-offs.	Mandate the identifier in intake, assessments, contracts, decision records, deployment, monitoring, incidents and reporting; test completeness.	OBJ-01, OBJ-02	ISO 6.1, 7.5, 8.1	AI Governance Lead	High	Proposed		Cross-artefact linkage rate; missing-link exceptions; audit retrieval time	Pilot completion, register change or governance-interface review	Complete
OPP-02	Integrate AIMS controls into existing digital, data, procurement, security, legal and service-management processes.	Reduced duplication, earlier specialist involvement and a governance route that teams can use in practice.	Map control triggers and hand-offs into existing methods, gates and systems; retain specialist authority and measure cycle time and rework.	OBJ-02, OBJ-08	ISO 4.4, 8.1	Executive Sponsor / AI Governance Lead	High	Proposed		Process integration map; cycle time; late-review exceptions; stakeholder feedback	Process redesign, audit finding or repeated delay	Complete
OPP-03	Turn the AI Register and dashboard into an evidence-led portfolio view.	Earlier identification of systemic risk, trends, capacity constraints and improvement priorities.	Define data-quality rules and automated or controlled feeds for risk, status, incidents, actions, assurance, training and benefits.	OBJ-01, OBJ-07, OBJ-08	ISO 9.1-9.3	AI Governance Lead / Data Owner	Medium	Proposed		Dashboard completeness, timeliness, exception rate and decisions supported	Reporting cycle, data-quality failure or management review	Complete
OPP-04	Create reusable supplier assurance patterns and evidence requirements.	More consistent procurement decisions, stronger leverage, less duplicated review and better exit readiness.	Develop risk-tiered clauses, evidence packs, review cadence and exception routes using AIG-ASS-08 and AIG-ASS-11; pilot on material procurements.	OBJ-06	ISO 8.1; A.10.2-A.10.4	Procurement / Legal Services	High	Proposed		Supplier review completion, clause exceptions, assurance findings and renewal outcomes	Procurement pipeline, renewal, material supplier change or incident	Complete
OPP-05	Use transparent governance and accessible engagement to strengthen resident and staff trust.	Better service design, earlier discovery of unintended impacts and more defensible public decisions.	Build user research, affected-group engagement, transparency and feedback into high-impact cases and monitor resulting changes.	OBJ-03, OBJ-05	ISO 4.2, 6.1, 9.1; A.5.4; A.8.2-A.8.5	Service Owner / Communications	Medium	Proposed		Engagement coverage, accessibility findings, complaints, trust feedback and design changes	New high-impact case, complaint trend or public-interest concern	Complete

The Council — AIMS Improvement and Implementation Plan

AIG-AIMS-03 · v1.2 draft · Draft for Council review · OFFICIAL

Purpose: control the actions required to move the AIMS from documented design to approved, operating and evidenced practice.

Current position: all actions are proposed; none has started (IMP-17 is planned). Council governance must confirm sequencing, owners, resources, target dates, dependencies and acceptance evidence.

Action ID	Improvement / implementation action	Rationale / source	Related risk(s)	Related objective(s)	ISO / SoA links	Acceptance criteria / evidence	Proposed owner	Supporting roles	Priority	Status	Planned start	Target completion	Progress %	Dependency	Evidence location	Closure validation	Last reviewed	RAG	Record QA
IMP-01	Confirm the senior accountable owner, adopting authority and formal AIMS scope.	AIG-AIMS-01 adoption decisions remain pending.	R-01, R-04	OBJ-08	ISO 4.3-4.4, 5.1-5.3	Approved AIG-AIMS-01; named accountable owner; approval evidence; effective date and communicated boundary.	Executive Sponsor	AI Governance Lead; Monitoring Officer; Legal	Critical	Not started			0%	Council delegations and governance route confirmed				Grey	Complete
IMP-02	Validate and approve all Statement of Applicability decisions.	AIG-AIMS-02 contains 38 proposed applicable controls but no operational evidence.	R-01, R-14	OBJ-08	ISO 6.1; Annex A	Licensed-standard validation; approved applicability and owners; justified exclusions if any; controlled approval record.	AI Governance Lead	Control Owners; Legal; Internal Audit	Critical	Not started			0%	IMP-01 and approved risk criteria				Grey	Complete
IMP-03	Approve the AI policy, AIMS objectives, risk criteria and acceptance authority.	Policy and measurable management-system objectives require leadership approval and resources.	R-01, R-04	OBJ-01 to OBJ-08	ISO 5.2, 6.1-6.2	Approved policy and objectives; baselines, targets, owners, dates, reporting cadence and risk-acceptance authority recorded.	Executive Sponsor / AI Assurance Board	AI Governance Lead; Risk; Finance; Service Owners	Critical	Not started			0%	IMP-01; strategic and resource decisions				Grey	Complete
IMP-04	Establish the controlled AIMS applicable-requirements and change register.	AIG-AIMS-01 requires a validated obligations record.	R-13	OBJ-03, OBJ-08	ISO 4.2, 6.1, 9.1; A.2.3	Requirements have authoritative source, owner, applicability, affected process/control, review date, change status and evidence.	Legal Services / AI Governance Lead	DPO; IG; Equality; Procurement; Security	High	Not started			0%	IMP-01 and confirmed scope				Grey	Complete
IMP-05	Approve governance Terms of Reference, delegations, RACI and competence/resource plan.	Proposed governance bodies and roles need formal authority and capability.	R-04, R-05	OBJ-02, OBJ-08	ISO 5.3, 7.1-7.3; A.3.2; A.4.6	Approved roles, membership, deputies, conflicts, delegations and escalation; competence matrix and resourcing decisions retained.	Executive Sponsor / AI Governance Lead	HR-L&D; Monitoring Officer; Governance Bodies	Critical	Not started			0%	IMP-01 and organisational design				Grey	Complete
IMP-06	Complete an AI inventory baseline and shadow-AI discovery campaign.	Inventory completeness has not been evidenced.	R-02, R-03	OBJ-01	ISO 6.1, 8.1; A.4.2; A.9.2	Directorate attestations, procurement and technology reconciliations, discovered cases registered/contained, completeness result and actions approved.	AI Governance Lead	Service Owners; Digital; Procurement; Security; Data	Critical	Not started			0%	IMP-05 roles and communications				Grey	Complete
IMP-07	Pilot the complete governance lifecycle on representative real AI cases.	Controlled templates require operational validation and process learning.	R-03, R-06, R-10	OBJ-02, OBJ-03, OBJ-04	ISO 8.1; Annex A lifecycle controls	At least three cases spanning different risk tiers follow intake through decision and live/closure status; timing, rework, gaps and user feedback recorded.	AI Governance Lead / Service Owners	All applicable control functions and governance bodies	High	Not started			0%	IMP-03 to IMP-06; suitable live cases				Grey	Complete
IMP-08	Implement a controlled AIMS evidence repository, document-control and retention structure.	Design documents exist, but live evidence locations and retention controls are not populated.	R-03, R-14, R-15	OBJ-01, OBJ-08	ISO 7.5, 9.1-9.3, 10.2	Approved taxonomy, access, versioning, retention, disposal and evidence-index rules; sampled records retrievable by AI Register ID and control.	AI Governance Lead / Information Governance	Records Management; Security; Control Owners	High	Not started			0%	IMP-01 and corporate records requirements				Grey	Complete
IMP-09	Deliver role-based AI governance training and verify competence.	Capability and capacity are material implementation risks.	R-05	OBJ-08	ISO 7.2-7.3; A.4.6	Target populations and competencies defined; training completed; assessment/effectiveness results and remedial actions retained.	AI Governance Lead / HR-L&D	Service Owners; Specialist Control Functions	High	Not started			0%	IMP-05 competence matrix and resource plan				Grey	Complete
IMP-10	Apply supplier due diligence and contract controls to material live procurements or renewals.	Supplier controls need operational proof and refinement.	R-09, R-10, R-15	OBJ-06	ISO 8.1; A.10.2-A.10.4	At least two material supplier cases evidence due diligence, risk-tiered terms, exceptions, assurance rights, change/incident duties and exit arrangements.	Procurement / Service Owners	Legal; Security; DPO; AI Governance Lead	High	Not started			0%	Procurement pipeline and IMP-04 requirements				Grey	Complete
IMP-11	Complete live impact, data, security and technical assurance for priority systems.	System-level evidence is needed to move controls beyond designed status.	R-06, R-07, R-08, R-10	OBJ-03, OBJ-04, OBJ-05	ISO 8.1; A.5-A.9	Priority systems have approved assessments, data plans, test results, security decisions, oversight/transparency controls and action closure.	Service Owners	DPO; Equality; Human Rights; Data; Security; Technical Reviewers	High	Not started			0%	IMP-06 inventory and risk prioritisation				Grey	Complete
IMP-12	Establish operational monitoring plans and AI dashboard data-quality rules.	Monitoring and dashboard artefacts require owners, thresholds and reliable live data.	R-11, R-14	OBJ-01, OBJ-04, OBJ-07	ISO 9.1; A.6.2.6-A.6.2.8	Live systems have approved measures, thresholds, owners, review cadence and change triggers; dashboard fields reconcile to source evidence.	AI Governance Lead / System Owners	Data Owner; Service Managers; Assurance Functions	High	Not started			0%	IMP-06 inventory and IMP-11 system assurance				Grey	Complete
IMP-13	Exercise AI incident, concern, complaint, escalation and corrective-action processes.	The incident form and routes require end-to-end testing.	R-08, R-12	OBJ-05, OBJ-07	ISO 7.4, 10.2; A.3.3; A.8.3-A.8.4	Tabletop exercise completed; roles, notification, communications, evidence, root cause, action and effectiveness gaps assigned and closed.	Incident Lead / AI Governance Lead	Security; DPO; Legal; Complaints; Communications; Service Owners	High	Not started			0%	IMP-05 roles and corporate incident interfaces				Grey	Complete
IMP-14	Approve the AIMS internal audit programme and conduct the first audit.	No evidence yet demonstrates independent sampling of AIMS operation.	R-14	OBJ-08	ISO 9.2	Risk-based audit programme, competence and independence confirmed; first audit completed; findings owned, dated and tracked.	Head of Internal Audit	AI Governance Lead; Control Owners	High	Not started			0%	Sufficient operating evidence from IMP-07 to IMP-13				Grey	Complete
IMP-15	Conduct the first formal AIMS management review and approve the improvement backlog.	Leadership review is required to evaluate suitability, adequacy and effectiveness.	R-01, R-14	OBJ-08	ISO 9.3, 10.1-10.2	Required inputs reviewed; decisions on resources, risks, objectives, scope, SoA and improvements recorded; actions tracked.	Executive Sponsor / AI Assurance Board	AI Governance Lead; Internal Audit; Control Owners	Critical	Not started			0%	IMP-14 audit and objective/performance evidence				Grey	Complete
IMP-16	Validate controlled retirement, decommissioning, archival and supplier-exit arrangements.	Lifecycle closure controls need evidence from real or simulated cases.	R-15	OBJ-04, OBJ-06	ISO 8.1; A.4.2-A.4.5; A.6.2.3; A.10.2-A.10.3	At least one retirement or exit test confirms decision, continuity, access revocation, data/records treatment, contract closure and AI Register status.	Service Owner / Technology Owner	Procurement; IG; Security; Data; AI Governance Lead	Medium	Not started			0%	Suitable system or controlled simulation				Grey	Complete
IMP-17	Societal impact assessment (ISO/IEC 42001 A.5.5): add a societal-impact prompt to the Responsible AI Assessment (AIG-ASS-04) and assess societal impacts	AIG-AIMS-11 known limitation: societal impacts (A.5.5) are not yet assessed explicitly for each use.	R-06	OBJ-03	ISO 6.1.4, 8.4; A.5.5	Societal-impact prompt approved in AIG-ASS-04; priority uses assessed for societal impacts with outcomes and treatment recorded; A.5.5 entry in AIG-AIMS-02 updated.	AI Governance Lead	Service Owners; Equality; Human Rights; Legal; Communities	Medium	Planned	04/01/2027	31/03/2027		IMP-11 system assurance; AIG-AIMS-11 coverage mapping				Blue	Complete

AIG-AIMS-03 — Status Definitions, Risk Matrix and Use Guidance

Objective status	Meaning
Draft	Proposed objective; not yet approved as a Council commitment.
Approved	Objective, owner, measure, baseline, target, resources and date are authorised.
Active	The objective is being pursued and monitored.
At risk	Evidence indicates the target may not be met without intervention.
Achieved	The target is met and supporting evidence has been reviewed.
Paused	Progress is formally paused with reason, authority and review date.
Closed	Objective is retired or replaced through an approved decision.

Risk status	Meaning
Draft assessment	Risk description or scoring awaits validation.
Open	Risk is confirmed and requires a decision or treatment.
Treatment planned	Treatment is selected but not yet operating.
In progress	Treatment action is under way.
Accepted	Authorised risk owner has accepted residual risk with review conditions.
Monitoring	Treatment is operating and residual risk/effectiveness is under review.
Closed	Risk no longer applies or is controlled within approved criteria, with evidence.

Action status	Meaning
Not started	Action is proposed and not authorised or scheduled.
Planned	Owner and target date are confirmed.
In progress	Work is actively under way.
Blocked	A dependency or decision prevents progress and requires escalation.
Complete	Acceptance criteria, evidence and independent closure validation are complete.
Cancelled	Action is withdrawn through an authorised, recorded decision.

Risk scoring matrix — likelihood × impact

Likelihood / Impact	1	2	3	4	5
1	1	2	3	4	5
2	2	4	6	8	10
3	3	6	9	12	15
4	4	8	12	16	20
5	5	10	15	20	25

Rating	Score
Low	1-5
Medium	6-10
High	11-15
Critical	16-25

Likelihood scale

1	**Rare**	Unlikely except in exceptional circumstances — Council to validate criteria.
2	**Unlikely**	Could occur but is not expected — Council to validate criteria.
3	**Possible**	Might occur during the planning horizon — Council to validate criteria.
4	**Likely**	Expected to occur in several circumstances — Council to validate criteria.
5	**Almost certain**	Expected frequently or already evident — Council to validate criteria.

Impact scale		
1	**Minimal**	Limited effect; routine local correction — Council to validate criteria.
2	**Minor**	Contained disruption or reversible limited impact — Council to validate criteria.
3	**Moderate**	Material service, legal, financial or trust impact — Council to validate criteria.
4	**Major**	Serious or widespread impact requiring senior response — Council to validate criteria.
5	**Severe**	Potential grave, systemic or irreversible harm — Council to validate criteria.

Decision and evidence rules
• This workbook is an AIMS-level control document; system-specific risks remain in AIG-ASS-02 and link back through the AI Register ID.
• Objective approval requires a baseline, target, owner, resources, target date, monitoring method and evidence source.
• Inherent scores are provisional desk-review judgements. Validate them against the Council's adopted corporate risk criteria.
• Do not enter a control-effectiveness score until treatment is implemented and evidence has been reviewed. Residual score = inherent score × CE factor (CE 1–5 ÷ 5), as in Playbook §4.4.3; residual bands use the same thresholds (Low ≤5, Medium >5–10, High >10–15, Critical >15) and the effective tier stays at the inherent tier until controls are evidenced; acceptance requires authorised ownership and review conditions.
• A treatment or improvement action is complete only when acceptance criteria, evidence and closure validation are recorded.
• Update objectives, risks and actions after incidents, complaints, audit findings, management review, material change or new requirements.
• AIG-AIMS-02 references show control design coverage only; they do not prove implementation or effectiveness.
• Validate all ISO clause and control references against the Council's licensed copy before formal adoption or certification use.
• Improvement Plan RAG: Red = Blocked, or past target date and not Complete/Cancelled; Amber = In progress, due within 30 days, or Complete without closure evidence; Green = Complete with Record QA complete; Blue = Planned; Grey = Not started or Cancelled.
Source and controlled-use note
Standard baseline: ISO/IEC 42001:2023, Information technology — Artificial intelligence — Management system.
Official standard page: https://www.iso.org/standard/42001
Council design sources: AI Governance Playbook (AIG-GOV-02, current controlled version per AIG-GOV-03); AIG-AIMS-01 AIMS Scope, Context and Interested Parties; AIG-AIMS-02 Statement of Applicability; the controlled AIG-* artefacts listed in the Artefact Index (AIG-GOV-03).
Control status: draft for Council review. Nothing in this workbook authorises deployment, accepts risk or establishes conformity.

AIG-AIMS-03 — PROPOSED AIG-INV-04/AIG-DEC-04 INTEGRATION NOTES

NOT APPROVED — additive integration annex only; existing workbook content and formulas are retained unchanged. AIG-INV-04 (AI Register) and AIG-DEC-04 (Gate Log) are themselves proposed designs: until the Council approves their adoption and migration, the Council's existing records remain authoritative and the AIG-INV-04/AIG-DEC-04 joins below are design references only. No live system, event, evidence, approval or Council decision is asserted.

Review topic	Targeted proposed integration note
Status / measurement rule	All OBJ, risk, opportunity and improvement entries remain proposed. Do not populate baseline, actual progress, residual rating, acceptance, target, resource commitment or closure from the proposed AIG-INV-04/AIG-DEC-04 design or from example data; agree measurement definitions, denominators, owner, period, target and approval first.
OBJ-01 inventory completeness	For the approved scope, reconcile known in-scope activity to permanent AIR-IDs in proposed AIG-INV-04 AI Register and discovery/mapping sources. Measure missing, duplicate, ownerless or stale records against a defined discovery population; do not count only an approved-tools-only view, which intentionally excludes non-approved lifecycle items. Keep any inventory review evidence in the AIG-INV-04 Evidence index by Evidence ID and AIR-ID.
OBJ-02 approval / gate discipline	Keep scheduled gates distinct from actual decisions: AIG-DEC-04 Gate plan is a plan; AIG-DEC-04 Gate events records dated events; AIG-DEC-04 Conditions tracks per-event conditions. Link each final decision to AIG-DEC-03 or the authorised native minutes and Evidence ID. Reconcile actual approval/outcome to AIG-INV-04 current Governance Approval Status and Operational Status; a plan, proposed event, incomplete condition, or green structural QA is not approval or permission to operate.
OBJ-03 impact assessment coverage	Use the AIR-ID to connect applicability/assessment references in the AIG-INV-04 Assessment summary to the underlying DPIA/EIA/HRA/Responsible AI records and the evidence index. Record which assessments are triggered, completed/reviewed, and actions resolved; only a substantive specialist decision/evidence establishes completion. Material scope or impact change should have a dated governance event/reassessment trail.
OBJ-04 production readiness / live operation	Join the current system and owner through AIR-ID; cite the relevant deployment decision/conditions (AIG-DEC-04 Event ID, Condition IDs, AIG-DEC-03) and AIG-OPS-02 monitoring evidence. Use actual monitored values and dated evidence in their source record. A readiness pointer, design reference or blank monitoring flag is not proof of operation.
OBJ-05 oversight / transparency / redress	Where applicable, link AIR-ID to the actual oversight/transparency/complaint evidence, and to dated AIG-DEC-04 decisions/events where approval, changed conditions, pause or resumption occurred. Keep individual complaint/person data in approved source systems; the join stores only necessary IDs and evidence pointers.
OBJ-06 suppliers / dependencies	Tie each supplier/partner obligation and due-diligence evidence to AIR-ID using evidence metadata (AIG-INV-04 Evidence index); record material release/contract changes in the appropriate source change record and any actual AIG-DEC-04 gate event. Generic supplier templates or an unpopulated reference are not an implemented contract control.
OBJ-07 incidents / exceptions / learning	Link a system-specific issue to AIR-ID and its actual incident/monitoring evidence (including AIG-OPS-03/AIG-OPS-02); when it is an AIMS nonconformity, track correction, cause and effectiveness separately in AIG-AIMS-08 and reference any AIG-DEC-04 event/condition. AIMS-wide issues may have no AIR-ID. Do not create or assert incident history.
OBJ-08 and AIMS-wide actions	Keep management-system objectives, resourcing, audit, review and improvement actions at AIMS level where they are not attributable to one system. Where a measure aggregates cases, define the frozen source population and as-at date, reconcile to AIR-IDs, and retain the underlying approved evidence; AIG-INV-04/AIG-DEC-04 are proposed joins, not live portfolio data.
Risk / opportunity / improvement registers	Preserve each risk ID, inherent/residual assessment, treatment, acceptance authority and improvement action in its authoritative AIMS record. Link system-specific risks/actions to AIR-ID and evidence references; link gate conditions only where an authorised decision created a condition. Do not collapse AIMS-level risk into system fields or confuse correcting a one-off issue with corrective action.
Review and reconciliation	At the approved review cadence reconcile objectives and actions with AIG-INV-04 identity/state, actual AIG-DEC-04 event and condition history, evidence-index pointers, AIG-OPS-02 monitoring, AIG-AIMS-07 audit, AIG-AIMS-08 CAPA and AIG-AIMS-09 management-review actions. Resolve orphan IDs, mismatched current states, overdue accepted conditions and superseded/missing evidence through an authorised, documented change.

PROPOSED QA INDEX — NOT APPROVED. A source reference does not establish applicability or compliance. See AIG-AIMS-05 and AIG-AIMS-13; owners must validate the current source, case-specific scope, control evidence and adopted status.

Requirement ID	Instrument / edition	Conditional scope / relevance	Source URL	Owner validation status
REQ-014	Local Government Act 1999 (Best Value Duty) and 2024 statutory guidance	Screen the legislation and statutory guidance requirement against this artefact's actual use and record evidence/version; see the AIG-AIMS-05 Applicable Requirements entry (REQ-014) for the controlled position.	https://www.gov.uk/government/publications/best-value-standards-and-intervention-a-statutory-guide-for-best-value-authorities	Specialist validation required
REQ-040	ISO/IEC 42001:2023 Artificial intelligence management system	Proposed management-system design mapping; licensed clause review and adoption needed.	https://www.iso.org/standard/42001	Specialist validation required
REQ-041	ISO/IEC 23894:2023 AI — Guidance on risk management	Voluntary risk-management guidance; proposed alignment, not statutory conformity.	https://www.iso.org/standard/77304.html	Specialist validation required

AIG-AIMS-03 / PROPOSED THREE-ARTEFACT SOURCE CONTRACT

Status	PROPOSED INTEGRATION DESIGN ONLY. This sheet does not amend the artefact's native assessment, decision authority, data or formulas.
Role of this file	Objectives and treatment: Use official AIR-ID for system-specific actions, an AIG-DEC-04 Event/Condition ID for gate actions, and a map Edge ID only for relationship-change questions. Do not treat closure of a map gap as risk acceptance.
AIG-INV-04 source	Separate AIG-INV-04 AI Register: official AIR-ID, current position, in-file Assessment summary/Evidence index. Reconcile against authoritative AIG-INV-04 before using a copied value.
AIG-DEC-04 source	Separate AIG-DEC-04 Gate Log: prospective Gate plan, dated Gate events, event-linked Conditions. A planned gate is not a decision. A decision requires AIG-DEC-03 or approved minutes and proper delegation.
Map source	Proposed standalone Capabilities and System Map (candidate catalogue ID AIG-INV-05): UC/CAP and component relationship pointers. Edge ID is not an approval or permission; AIG-AGT-04/AIG-AGT-05 remain sources of agent scope/authority.
Data exchange	Use controlled AIR-ID across files. Where applicable reference exact Event ID, Condition ID, Evidence ID, AG-ID and Edge ID. Record source file/version/as-at with imported or quoted evidence; no live cross-workbook formula is assumed.
Change trigger	New or expanded system/tool access, or a material model, data, interface, purpose or agent change: log the map change, obtain owner reassessment and escalate to the proper AIG-DEC-04 gate/AIG-DEC-03 decision when required.
Validation before use	The INTEGRATION INV-04 DEC-04 tab in this workbook is current supporting design guidance (not historical) and holds the detailed join notes. Controlled owners must reconcile real records, validate values and formulas in Excel, and approve migration/cutover; existing Council records remain unchanged until then.
