The Council — AI Governance Priority Index (AGPI)

AGPI sets the urgency and sequencing of governance attention; it does not approve a system or use, and it does not set the route (the governing tier does — Playbook §3.10.1). Complete one score for the system baseline or a materially distinct UC-ID. Do not let a lower-scored use conceal a higher-priority use.

System being assessed

System / model name	
AIR-ID	
Assessed by / date	

UC-ID (required when scope is UC-ID specific) — Enter the exact UC-ID assessed when the scope (row 18) is UC-ID specific; leave blank onl

Governance dimension	Weight	Score (1–5)	Weighted points	Assessment consideration	Rationale / evidence ref (required)
Resident Impact	25%			Could the AI influence services, decisions or outcomes affecting residents or service users?	
Public Trust & Reputation	20%			Could failures reduce confidence in the Council or attract significant public scrutiny?	
Legal & Regulatory Exposure	20%			Does the AI engage statutory duties, regulatory requirements or legal obligations?	
Governance Visibility & Accountability	15%			Is ownership clear? Is the AI registered, documented and appropriately governed?	
Strategic Value & Organisational Dependency	10%			How important is the AI to delivering the Council's strategic objectives and operational performance?	
Human Oversight & Decision Authority	10%			Does meaningful human oversight exist and can AI-assisted decisions be reviewed or challenged?	
AGPI score (0–100)	100%			Sum of weighted points	
Governance priority	**Incomplete — assessment required**			priority floor in row 21 and the trigger floor in row 24. It does not set the route: forum, assessments, gates and review cadence follow the governing tier (Playbook §3.10.1; AIG-ASS-02). Needs scope, the §4.4.6 trigger	
Assessment scope (UC-ID specific / Shared system baseline)				UC-ID specific requires the UC-ID in B8; Shared system baseline requires B8 blank. A base	
Governance Investigation Required? (Yes / No)	**No**			Playbook §3.9.5 Shadow AI classification: Yes where ownership, purpose or operational us	
Weight check (controlled weights total 100%)	**OK — weights total 100%**			Weights are set in Playbook §3.9.6 (25/20/20/15/10/10). Only a documented Working Grou	
Priority floor: Resident Impact or Legal & Regulatory Exposure = 5 (Proposed — for Council confirmation)				includes it; the AGPI score in D16 is unchanged. The §3.9.6 trigger floor (a use with a §4.4.6 mandatory trigger cannot be Priority 5) is applied in B17 from row 23; see row 24.	
Typical governance attention for this priority (urgency)				How quickly and in what order governance attention is given for the B17 priority (reference table below). The decision route follows the governing tier (Playbook §3.10.1), not this priority.	
Mandatory escalation trigger applies (Playbook §4.4.6)? (Yes / No / Unsure)				Answer for this use: special category data at scale; vulnerable residents; housing, care or h	
Trigger floor: a §4.4.6 trigger use is at least Priority 4 (Proposed — for Council confirmation)				Unsure) cannot be Priority 5 – Observe. B17 applies Priority 4 – Routine automatically; this is a rule, not a priority override, so no AIG-DEC-03 override record is needed. The AGPI score in D16 is unchanged.	

Reference — scoring scale and priority thresholds

Score	Meaning
1	Very low governance concern
2	Low governance concern
3	Moderate governance concern
4	Significant governance concern
5	Critical governance concern

AGPI score (Playbook §3.9.6)	Priority and typical governance attention (urgency; the route follows the governing tier, Playbook §3.10.1)
≥80	Priority 1 – Critical: Immediately, first in the queue: governance review with executive oversight; the route, assessments and decision follow the governing tier (Playbook §3.10.1).
≥60 to <80	Priority 2 – High: Promptly, next in the queue: enhanced attention and early risk review with AI Governance Working Group oversight; the route, assessments and decision follow the governing tier (Playbook §3.10.1).
≥40 to <60	Priority 3 – Standard: In normal order: standard governance attention and ongoing monitoring; the route, assessments and decision follow the governing tier (Playbook §3.10.1).
≥20 to <40	Priority 4 – Routine: In routine order: linked UC-ID record under the system AIR-ID and periodic review; the route, assessments and decision follow the governing tier (Playbook §3.10.1).

<20	Priority 5 – Observe: When capacity allows: local management oversight, with reassessment before operational deployment.
Note	Priority floor (live; Proposed — for Council confirmation): Resident Impact = 5 or Legal & Regulatory Exposure = 5 → at least Priority 2 – High, whatever the AGPI score. A use with a §4.4.6 mandatory trigger (row 23 Yes or Unsure) cannot be Priority 5: it becomes at least Priority 4 – Routine automatically (trigger floor, row 24).
Note	Priority sets urgency and sequencing only. The route (forum, assessments, gates, review cadence) is set by the governing tier: the highest of the §4.4 risk tier, any §4.4.6 trigger floor, the impact floor (any confirmed Impact 5 → at least Medium) and, for action-capable uses, the agency-tier minimum (AIG-ASS-02). Where the priority is P1 or P2 but the governing tier is lower than the guide (P1 → High/Critical; P2 → Medium/High), the AI Governance Working Group records the reason in AIG-ASS-02 Step 6 and may raise, never lower, the tier.

AIG-ASS-01 — Document Control

Controlled working template. Draft for Council review; not Council-adopted and not effective until formally approved.

Field	Controlled value
Document ID	AIG-ASS-01
Artefact	AI Governance Priority Index (AGPI) Triage Tool
Version	1.4 draft
Status	Draft for Council review
Document owner	AI Governance Lead
Approving body	Competent Council authority under Constitution and Scheme of Delegation; AI Assurance Board provides assurance where applicable
Approval date	Not yet approved
Effective date	Not yet effective
Next review date	To be set on approval: 12 months after effective date or sooner following material change

Change history

Version	Date	Change	Author / owner
1.0 draft	6 August 2026	Step 4.3 spreadsheet QA controls and document-control baseline established.	AI Governance Lead
1.1 draft	29 September 2026	Priority override route: record the decision in AIG-DEC-03 and log it in AIG-DEC-04 with the new Event type “Priority override” (previously “Decision = Priority override”, which was not an AIG-DEC-04 value).	AI Governance Lead
1.2 draft	29 September 2026	QA remediation — applied findings QA-142, QA-207, QA-230, QA-240, QA-242, QA-244, QA-245, QA-251, QA-262, QA-273, QA-278, QA-280, QA-286, QA-291 (see QA change log).	AI Governance Lead
1.3 draft	30 September 2026	v3.8: priority floor made live in the controlled result (Resident Impact or Legal & Regulatory Exposure = 5 → at least Priority 2 – High; B17 shows the floored priority, row 21 shows “Priority floor applied: Resident/Legal = 5” when it bites, row 22 shows the governance response); “calibration view only” labelling removed; priority reframed as urgency and sequencing only, with the route set by the governing tier (Playbook §3.10.1); reference table notes added. Final tidy-up: reference table B33:B38 (shown in B22) reworded as typical governance attention (urgency), matching Playbook §3.9.6; the route, assessments and decision follow the governing tier. Proposed — for Council confirmation.	AI Governance Lead
1.4 draft	30 September 2026	v3.9.2: new input row 23 “Mandatory escalation trigger applies (Playbook §4.4.6)? Yes / No / Unsure” (required; Unsure counts as Yes) and trigger floor: a trigger use cannot be Priority 5 – Observe and becomes at least Priority 4 – Routine in B17 automatically; row 24 shows “Trigger floor applied” when it bites. No priority override record is needed (Playbook §3.9.6; scenario findings W-05, OA-04). Tested on all 15,625 score combinations with the trigger Yes and No. Proposed — for Council confirmation.	AI Governance Lead

Classification: OFFICIAL. Approval, effective and review dates must be completed by the document owner following formal governance approval.

AIG-ASS-01 — PROPOSED AIG-INV-04/AIG-DEC-04 INTEGRATION NOTES

NOT APPROVED — additive integration annex only; existing workbook content and formulas are retained unchanged. AIG-INV-04 (AI Register) and AIG-DEC-04 (Gate Log) are themselves proposed designs: until the Council approves their adoption and migration, the Council's existing records remain authoritative and the AIG-INV-04/AIG-DEC-04 joins below are design references only. No live system, event, evidence, approval or Council decision is asserted.

Contract area	Authoritative key / authority	Link / required handling and trigger
System key	AIG-INV-04 AI Register is the authoritative portfolio system row; AIR-ID is the permanent system key. AIG-ASS-01 remains the scoring/triage record and must carry that same AIR-ID.	Join to AIG-INV-04 by exact AIR-ID. Do not create a second system ID or replace the AIG-INV-04 source record.
Priority authority	AGPI score and calculated priority band in AIG-ASS-01 are the assessment result. A priority override is a separate, explicit governance decision, not a change to the score or a silent reclassification.	Record the decision in AIG-DEC-03 (priority before and after, reason, authority and Assurance update reference) and log it in AIG-DEC-04 as a Gate Event for the same AIR-ID with Event type "Priority override".
Override record (AIG-DEC-03)	For a final override, record in AIG-DEC-03 (or approved minutes): priority before override, priority after override, reason, authority and the Assurance update reference. Also complete the normal decision fields and evidence.	AIG-DEC-04 holds the dated pointer, not the values (Playbook Annex G.4): log a Gate event with Event type "Priority override", the decision-maker/role and the AIG-DEC-03 / minutes ref, Outcome blank or "No decision". No override is complete without the AIG-DEC-03 record and that dated event.
Assurance update	Update the current authoritative priority to reflect the decision and retain the previous AGPI assessment and source evidence. Keep the calculated AGPI score/band distinguishable from the authorised override.	Use the same AIR-ID on the assurance update and cite its reference in the AIG-DEC-03 record. Update the current priority in the AIG-INV-04 Assessment summary (Effective Governance Priority and Latest priority-override Event ID); do not overwrite historical scores.
Gate response	A changed priority changes the urgency and sequencing of governance attention only. The route and required gate(s) follow the governing tier (Playbook §3.10.1; AIG-ASS-02); the authorised decision and any resulting gate(s) belong in AIG-DEC-03/AIG-DEC-04.	Review/create the appropriate Gate Plan requirement(s) and record gate decisions as Gate Events. Do not treat a priority label alone as gate approval.

PROPOSED QA INDEX — NOT APPROVED. A source reference does not establish applicability or compliance. See AIG-AIMS-05 and AIG-AIMS-13; owners must validate the current source, case-specific scope, control evidence and adopted status.

Requirement ID	Instrument / edition	Conditional scope / relevance	Source URL	Owner validation status
REQ-001	UK General Data Protection Regulation (UK GDPR), as amended	Where personal data is processed; test each UK GDPR provision separately.	https://www.legislation.gov.uk/eur/2016/679/contents	Specialist validation required
REQ-005	Equality Act 2010, including Public Sector Equality Duty section 149	Public authority due regard under s.149; case-level equality screening is not risk-tier gated.	https://www.legislation.gov.uk/ukpga/2010/15/section/149	Specialist validation required
REQ-006	Human Rights Act 1998	Public-authority compatibility under s.6; assess Convention rights engaged by the case.	https://www.legislation.gov.uk/ukpga/1998/42/contents	Specialist validation required
REQ-032	Regulation (EU) 2024/1689 (EU AI Act), consolidated and amended by enacted Regulation (EU) 2026/1744	Only after case-specific EU territorial, actor-role and material scope assessment.	https://eur-lex.europa.eu/legal-content/EN/TXT/HTML?uri=CELEX:02024R1689-20260727 ; amending Regulation (EU) 2026/1744: https://eur-lex.europa.eu/legal-content/EN/TXT/HTML/?uri=CELEX:32026R1744	Specialist validation required
REQ-041	ISO/IEC 23894:2023 AI — Guidance on risk management	Voluntary risk-management guidance; proposed alignment, not statutory conformity.	https://www.iso.org/standard/77304.html	Specialist validation required

AIG-ASS-01 / PROPOSED THREE-ARTEFACT SOURCE CONTRACT

Status	PROPOSED INTEGRATION DESIGN ONLY. This sheet does not amend the artefact's native assessment, decision authority, data or formulas.
Role of this file	Priority assessment: AIG-ASS-01 owns score/rationale; AIG-INV-04 Assessment summary stores a dated pointer, not a second scoring result. Map coverage does not change AGPI.
AIG-INV-04 source	Separate AIG-INV-04 AI Register: official AIR-ID, current position, in-file Assessment summary/Evidence index. Reconcile against authoritative AIG-INV-04 before using a copied value.
AIG-DEC-04 source	Separate AIG-DEC-04 Gate Log: prospective Gate plan, dated Gate events, event-linked Conditions. A planned gate is not a decision. A decision requires AIG-DEC-03 or approved minutes and proper delegation.
Map source	Proposed standalone Capabilities and System Map (candidate catalogue ID AIG-INV-05): UC/CAP and component relationship pointers. Edge ID is not an approval or permission; AIG-AGT-04/AIG-AGT-05 remain sources of agent scope/authority.
Data exchange	Use controlled AIR-ID across files. Where applicable reference exact Event ID, Condition ID, Evidence ID, AG-ID and Edge ID. Record source file/version/as-at with imported or quoted evidence; no live cross-workbook formula is assumed.
Change trigger	New or expanded system/tool access, or a material model, data, interface, purpose or agent change: log the map change, obtain owner reassessment and escalate to the proper AIG-DEC-04 gate/AIG-DEC-03 decision when required.
Validation before use	The INTEGRATION INV-04 DEC-04 tab in this workbook is current supporting design guidance (not historical) and holds the detailed join notes. Controlled owners must reconcile real records, validate values and formulas in Excel, and approve migration/cutover; existing Council records remain unchanged until then.
