

The Council — AI Governance Artefact Index

The Council · AI Governance Playbook — companion artefacts

This index lists the 52 active proposed artefacts by purpose-grouped ID, lifecycle and role. It is a navigation aid, not an adoption or approval record. AIG-INV-05 is a controlled artefact in the proposed catalogue for the Capabilities and System Map; it is not approved or operational, and its formal owner, approver, access and retention controls remain pending. It complements—not replaces—the AI Register AIG-INV-04, which holds stable AIR-IDs, system identity and current state. AIG-DEC-04 records gate plans/events/conditions; AIG-DEC-03 or approved delegated-forum minutes hold authoritative decisions. AIG-DEC-01 maps routes but does not confer authority. The separate HISTORICAL_Artefact_ID_Crosswalk_Old_To_New.xlsx is excluded from the 52 active entries; it is an archive-only lookup, not a current catalogue.

Follow the START HERE — LIFECYCLE ROUTE below. The AIG-... identifiers name suite documents; the AIR-ID identifies one governed system and stays stable when documents change. AIG-INV-05 is a controlled descriptive map only, not an approval, access grant or decision source.

Index rule — the AI Register identifies a system once by AIR-ID; AIG-INV-05 identifies distinct uses by UC-ID. Index source references for priority/risk assessment, delegated decision/conditions, gate event, deployment, incident and monitoring at AIR-ID + UC-ID. The map is descriptive only; neither it nor this index approves a use. The supplementary UC_ID_Risk_Decision_Current_View.xlsx is a manually source-reconciled, one-row-per-UC-ID risk/decision snapshot; it is not a 53rd AIG-labelled active catalogue artefact and confers no delegated decision authority.

Controlled artefact / ID	Playbook ref	Lifecycle stage	Primary owner
AIG-GOV-01 — Suite README / Contents	Suite administration	All stages — suite control	AI Governance Lead
AIG-GOV-02 — AI Governance Playbook	Full framework	All stages — framework authority	AI Governance Lead
AIG-GOV-03 — AI Governance Artefact Index	Suite administration	All stages — artefact control	AI Governance Lead
AIG-INV-01 — Staff Guide — Do I Need to Register AI?	§5.4	Awareness / all staff	AI Governance Lead

AIG-AIMS-06 — AIMS Clause Conformity Register	ISO 42001 §4 –§10	AIMS assurance & gap assessment	AI Governance Lead
AIG-AIMS-07 — AIMS Internal Audit Programme and Procedure	ISO 42001 §9.2	Performance evaluation	AI Gov Lead / Internal Audit
AIG-AIMS-08 — AIMS Nonconformity and Corrective Action	ISO 42001 §10.2	Improvement	AI Governance Lead
AIG-AIMS-09 — AIMS Management Review	ISO 42001 §9.3	Performance evaluation	AI Assurance Board
AIG-AIMS-10 — AIMS Monitoring and Measurement Plan	ISO 42001 §9.1	Performance evaluation	AI Governance Lead
AIG-GOV-04 — AIMS Leadership Commitment Statement	ISO 42001 §5.1	AIMS leadership & commitment	Pending — confirm owner
AIG-GOV-05 — AI Policy Statement	ISO 42001 §5.2	AIMS leadership & policy	AI Assurance Board
AIG-AIMS-11 — AIMS Impact Assessment Coverage Mapping	ISO 42001 §6.1.4	AIMS planning / assessment	AI Governance Lead
AIG-DEC-04 — AI Governance Gate Log	§3.6 / §3.7 / §3.10.4	Separate Gate Plan (prospective), dated Gate Events (what occurred) and Event-linked Conditions; not a decision record.	AI Governance Lead / governance secretariat (operational custody)

Controlled artefact / ID	Playbook ref	Lifecycle stage	Primary owner
AIG-AIMS-12 — AIMS Clause-Level Crosswalk	Appendix D	AIMS assurance & mapping	AI Governance Lead
AIG-DEC-02 — Decision-Ready Paper	§3.10.4	Approval & assurance	AI Governance Lead
AIG-OPS-02 — AI Post-Deployment Monitoring & Review Log	§3.10.5, §6.4	Live operation, monitoring, review & reassessment	Service Owner / AI Governance Lead
AIG-DEC-01 — AI Governance Gate Map	§3.4	Governance Gate Map for forum/gate routing and configuration; not the Capabilities and System Map.	AI Governance Lead
AIG-OPS-04 — AI Contestability and Redress Control	Principle 5 (contestability)	Monitoring & operation	AI Governance Lead
AIG-AIMS-13 — Source Assurance and Traceability Register	§2.5, §6.6.5	Horizon scanning / source assurance	AI Governance Lead
AIG-ASS-12 — Fundamental Rights Coverage Crosswalk	§4.6; EU AI Act Art 27	Risk assessment & review	Pending — confirm owner
AIG-AGT-01 — AI Agentic Governance Design Principles	Agentic layer (new)	All stages — governs agentic	AI Governance Lead
AIG-AGT-04 — Agent Record (ASBOM)	Agentic layer (new)	Intake to retirement	AI Governance Lead
AIG-AGT-05 — Agent Authority Graph	Agentic layer (new)	Design, deploy, operate	AI Governance Lead
AIG-AGT-02 — Agentic Classification Reference	§3.9; agentic layer	Triage	AI Governance Lead
AIG-AGT-03 — Agentic Triage (function spec)	§3.9, §4.4, §4.7.7	Triage / routing	AI Governance Lead
AIG-INV-02 — AI Fast-Track Screening	Agentic layer / §3.8	Pre-triage routing; all-No + Governance Lead validation for Light-touch; any Yes/Unsure goes to full triage	AI Governance Lead
AIG-AGT-06 — Agentic Action/Decision Record	§4.7.20 / §4.7.21	Runtime evidence & monitoring	Platform / AI Governance Lead
AIG-INV-05 — Capabilities and System Map Controlled artefact in the proposed catalogue; draft only, not approved or operational All stages — descriptive relationships among UC-ID, CAP-ID, AIR-ID and component pointers; no approval authority or live evidence. Proposed custodian: Governance function with service/architecture owners; formal owner to be confirmed.	Controlled artefact in proposed catalogue; draft only, not approved, effective or operational	All stages — descriptive relationships among UC-ID, CAP-ID, AIR-ID and source component pointers; no approval authority and no live evidence.	AI Governance Lead with service/architecture owners (proposed)

START HERE — LIFECYCLE ROUTE

1. Discover and intake — identify the proposed use and complete Intake (AIG-INV-03); use Fast-Track Screening (AIG-INV-02) only where eligible.
2. Register — the governance steward creates/reconciles the stable AIR-ID in the AI Register (AIG-INV-04).
3. Assess — complete risk/priority triage and only the specialist assessments triggered by the case.
4. Decide and gate — record plans, dated events and conditions in AIG-DEC-04; the delegated Council forum decides, with its decision captured in AIG-DEC-03 or approved forum minutes.
5. Operate and monitor — carry approved conditions into deployment (AIG-OPS-01) and live monitoring (AIG-OPS-02).

ID rule — AIG-... identifiers name suite documents; the AIR-ID identifies one governed system and stays stable when documents change. AIG-INV-05 is a controlled descriptive map only, not an approval, access grant or decision source.

Roles — Service Owners provide accurate intake facts and assigned evidence; the governance steward maintains the Register/Gate Log; the Assurance Board provides assurance; the delegated Council forum decides.

Lifecycle at a glance

Stage	Forms used
1. Idea & innovation	Staff quick-guide (do I need to register?); governance bodies operate under the Terms of Reference
2. Registration & intake	One AI Register system row/AIR-ID with each materially distinct UC-ID identified in Intake; Supplier Questionnaire if procuring.
3. Risk assessment & review	AGPI, Risk Worksheet, Checklist, Responsible AI, DPIA, EIA, Human Rights and Security Review (where required)
4. Approval & assurance	Decision Record, completed required reviews, Model Card and ATRS Record; append each forum decision, condition and next gate to the Gate Log; authority follows the Terms of Reference
5. Deployment & operation	Deployment and Rollout Plan verifies each UC-ID's delegated decision, permitted scope and conditions; reconcile system Register state, but do not treat Approved/Active as use permission.
6. Monitoring & review	AI Incident Report Form, Register reviews, Gate Log condition tracking, Reporting Templates and Dashboard; Post-Deployment Monitoring & Review Log for actual metric results, thresholds, breaches, complaints/override trends and reassessment decisions; and the Contestability and Redress Control for challenges to AI-influenced decisions
7. Retirement	Close/retire each UC-ID separately; retire the AIR-ID only when all linked uses are closed/retired, with the decision and final Gate Event recorded.

Agentic route and evidence: use AIG-AGT-02/AIG-AGT-03 for the consequence, autonomy, authority, reach and controllability profile; persistence and delegation are separate flags. Action-capable cases trigger proportionate AIG-ASS-11 security tests and AIG-AGT-04 control/evidence status regardless of base tier. Link production readiness in AIG-DEC-03/AIG-OPS-01/AIG-DEC-04, live monitoring in AIG-OPS-02, consequential actions in AIG-AGT-06 and incidents in AIG-OPS-03. An AI Assurance Board assurance opinion supports but does not replace the delegated Council decision; the Governance Lead/function maintains the operational continuity record.

Document control

Administrative control record. This artefact remains a working draft until formally approved.

Field	Controlled value
Document ID	AIG-GOV-03
Version	1.21 draft
Status	Draft for council review
Document owner	AI Governance Lead
Approving body	Pending confirmation — Competent Council authority under Constitution and Scheme of Delegation; AI Assurance Board provides assurance; exact delegation and publication authority to be verified by Monitoring Officer.
Approval date	Not yet approved
Effective date	Not yet effective
Next review date	To be set on approval: 12 months after the effective date, or sooner following material change
Classification	OFFICIAL

Change history

Version	Date	Change summary	Owner
1.11 draft	13 September 2026	Draft change history consolidated to a single controlled baseline ahead of first circulation for Council review.	AI Governance Lead
1.12 draft	15 September 2026	Added WCC-AIG-42 (Source Assurance and Traceability Register) and WCC-AIG-43 (Fundamental Rights Coverage Crosswalk); sequence now WCC-AIG-00 to 43.	AI Governance Lead
1.13 draft	19 September 2026	Indexed the agentic governance layer (WCC-AIG-44 to WCC-AIG-50).	AI Governance Lead
1.15 draft	20 September 2026	Full governance QA release 1.15: reconciled WCC-AIG-00 to 49 as the current controlled inventory, aligned agentic artefact identifiers, corrected decision-authority routing, and clarified assurance versus formal Council decision rights.	AI Governance Lead
1.16 draft	20 September 2026	Lean Operating Model: separated Service Owner forms from governance-maintained records and reinforced three routes.	AI Governance Lead
1.18 draft	20 September 2026	Completed Westminster controlled-inventory re-baseline: all 51 controlled artefacts WCC-AIG-00 to WCC-AIG-50 indexed; missing self-identifiers corrected.	AI Governance Lead
1.19 draft	20 September 2026	Post-QA document-control correction: Westminster identity retained consistently; controlled inventory reconciled through WCC-AIG-50; index numerically ordered; supporting suite references updated to WCC-AIG-50; Excel validation confirmed using controlled list range.	AI Governance Lead
1.20 draft	25 September 2026	Aligned agentic artefact route and security evidence requirements.	AI Governance Lead
1.21 draft	25 September 2026	Proposed 05/36 architecture, continuity-record custody and separation of evidence pointers, event history and authoritative decisions. For Council review; not approved.	AI Governance Lead

Artefact classification and bureaucracy reduction

For operational use, artefacts fall into four classes. Only the first two are normally user-facing.

1. Core operational records

Staff Guide, Fast-Track Screen, Intake, AI Register, priority/risk assessment, Decision Record, Gate Log, Deployment/Monitoring records and, where applicable, Agent Record/ASBOM.

2. Triggered specialist assurance

DPIA, Equality Impact Assessment, Human Rights Assessment, security review, supplier due diligence, ATRS and other specialist controls. These are triggered by applicability and risk.

3. Management-system infrastructure

AIMS scope, Statement of Applicability, audit, management review, nonconformity/corrective action, requirements register, source assurance and ISO/NIST crosswalks. These demonstrate organisational governance and should not be treated as per-project forms.

4. Reference and design material

Gap analyses, design principles, worked examples, layer indexes, triage design options and crosswalk explanatory documents. These support the framework and should not add workflow steps.

Non-duplication rule

Non-duplication rule. Where an existing record can hold the required information, use a field, link, workflow state or derived view rather than creating another artefact. Keep a single evidence index of pointers to source evidence; the Register and Gate Log refer to evidence and decisions, rather than duplicating their content.

PROPOSED INTEGRATION NOTE — FOR COUNCIL REVIEW; NOT APPROVED

PROPOSED INTEGRATION — NOT APPROVED. Separate draft AIG-INV-04 is the current-state Register, keyed by permanent AIR-ID, with current assurance and evidence pointers. Separate draft AIG-DEC-04 holds prospective Gate Plans, dated Events and event-linked Conditions. A Plan is not an event or decision; AIG-DEC-03 and/or approved forum minutes remain the authoritative decision record. The proposed AIG-INV-05 map is a descriptive UC-ID → CAP-ID → AIR-ID/system/component cross-reference only, not a

decision, access, risk or approval record. AIG-DEC-01 is the separate forum-routing map. The governance function maintains proposed continuity references; source owners validate map links; delegated forums decide. All designs remain unadopted until controlled review, approval and migration.

Controlled catalogue amendments after adoption — authority gap

POST-ADOPTION CHANGE AUTHORITY GAP. The proposed AIG-INV-05 row and grouped crosswalk do not assign authority to renumber, replace or amend the adopted catalogue. Before adoption, the Council must name the delegated approver for future controlled index, identifier and schema changes, with a decision record, effective edition and old-to-new crosswalk. The AI Governance Lead can maintain draft inventory proposals but cannot approve their release solely as custodian. Preserve original identifiers and historical references until an authorised cutover has been recorded.

Standards and legal applicability — proposed QA cross-reference

PROPOSED QA INDEX — NOT APPROVED LEGAL ADVICE OR EVIDENCE OF COMPLIANCE. The listed instruments may be relevant to this artefact, but applicability depends on the case, service and Council delegation. Legislation, official guidance, Council policy and voluntary standards are different authority classes. The full 51-entry requirement inventory, authoritative URLs, validation owners and current versions are in AIG-AIMS-05; source checks are in AIG-AIMS-13. Do not treat a template, plan or cross-reference as completed assessment, adopted policy, ISO conformity or legal sign-off.

Requirement / instrument	Why check it here	Source
REQ-040 — ISO/IEC 42001:2023 Artificial intelligence management system	Proposed management-system design mapping; licensed clause review and adoption needed.	https://www.iso.org/standard/42001
REQ-044 — Council AI Governance Playbook — proposed edition/version and currency to be owner-validated	Proposed Council suite edition and controlled adoption remain unconfirmed.	Internal controlled suite — 52 purpose-grouped artefacts (see AIG-GOV-03)
